Section III. Management Discussion and Analysis

I. Main businesses of the Company in the reporting period

The main business of the Company during the reporting period was auto sales, auto testing, maintenance and accessories sales; resource assets management and jewelry service business.

- (1) Automobile sales, testing, maintenance and parts sales: In the first half of 2021, China's economy continued the recovery trend on the whole, but there were large structural differences, production was stronger than demand, investment was better than consumption, and optional consumer goods such as automobiles were less than expected. During the reporting period, under the adverse circumstances of the market environment, the company carried out a variety of innovative marketing methods and other measures to increase marketing efforts and improve after-sales service level. Sales revenue of automobiles was 95.6439 million yuan, a decrease of 3.19% over the same period last year, the revenue from auto inspection and maintenance and accessories sales was 23.1571 million yuan, an increase of 21% over the same period last year.
- (2) Resource asset management:With the increasing COVID-19 vaccine coverage rate, and the gradual improvement of the pandemic situation in China, the demand of the property rental market has also increased significantly and the vacancy rate has decreased significantly. During the reporting period, in response to the gradual recovery of the market, on the one hand, the company improved the quality of old property and consolidated the basic ability of commercial operation; On the other hand, weincreased the promotion of activities, promoted the improvement of internal management by relying on professional institutions, and introduced preferential investment policies in time to seize the market heights in combination with the deep impact of the pandemic. During the reporting period, the Company achieved 99.0131 million yuan from property rental and services, an increase of 59.31% over the same period last year.
- (3) Jewelry service business:The domestic gold and jewelry retail market has recovered significantly. From January to May, the total retail sales of gold, silver and jewelry consumer goods reached 128.3 billion yuan, increased by 68.4% year on year. During the reporting period, the company took multiple measures, deeply explored the extension of third-party comprehensive services for jewelry, and innovated the business model. On the other hand, we strengthened risk monitoring to ensure the steady growth of state-owned assets and investors' interests. In the first half year of 2021, the cumulative operating income was 31.6779 million yuan, an increase of 14.7147 million yuan or 86.74% over the same period last year.

II. Core Competitiveness Analysis

(i) Deeply cultivate the jewelry industry, give full play to the advantages of identity, and build an industrial platform

The company has continued to try to innovate business models and steadily promote the implementation of

transformation projects, give full play to the credit advantages of state-owned listed companies and the physical platform resources in the Shuibei area where the jewelry industry gathers, deeply penetrate into the industry chain of jewelry industry, and rapidly increase the reputation and industryinfluence of Tellus in the jewelry industry, accelerate the implementation of Tellus' strategic projects, and realize Tellus's goal of strategic transformation into a third-party integrated operation service provider for the jewelry industry. Shenzhen Tellus Treasure Supply Chain Tech. Co., Ltd. was established in 2019 to carry out jewelry supply chain business, consolidate third-party jewelry services, and create a third-party value-added service platform for the jewelry industry that integrates precious metal storage, gold and diamond supply chain services and third-party safe deposit boxes. Shenzhen Jewelry Industry Service Co., LTD was established in 2020 to provide bonded display, bonded warehousing, customs declaration, logistics, settlement and other services, and finally it will be built into a comprehensive element trading service platform with international influence integrating jewelry and diamond raw materials and finished products display, spot trading, testing, identification, design, processing, e-commerce, financial services, and insurance.

(2) Abundant property resources provide stable business income and financial support

The company is the largest owner of the Tellus Gman Gold Jewelry Industrial Park in the Shuibei area, Tellus Shuibei Jewelry Building has been fully put into use, and the construction project of the Tellus Jinzhuan Trading Building is progressing as planned. At the same time, as the largest owner of the 04 and 05 plots in the urban renewal unit planning project of Buxin Industrial Zone, the company will plan and construct innovative industrial projects in Buxin area that conform to the overall strategic layout of the city, district and the Company through renovation. The company will maintain its position as the largest owner of Shuibei and Buxin areas, and grasp the advantages of physical platform resources in the core area of the jewelry industry. In addition, the Company has a large amount of property resources in various districts in Shenzhen, on the basis of maintaining the stability of the original leasing business, the company will actively promote the improvement of property quality and transform its old properties from the traditional method of simple leasing to the direction of property asset operation, so as to fully enhance and tap the added value of the property brand, bring stable business income and cash flow to the company, and provide a solid foundation for the company's long-term development.

III. Main business analysis

X. Risks and countermeasures

(1) The overall economic environment has a serious negative impact on company operations

Affected by the epidemic, the jewelry industry has shown a trend of sharp decline in market demand, a backlog of upstream and downstream inventories, and a decline in corporate performance. At the same time, most of the transportation channels for valuables from Hong Kong and other regions outside the country to China have stagnated, which has seriously affected the circulation and transactions of diamond jewelry.

In response to this risk, the company will actively take various preventive measures. The first is to continue to strengthen management, improve efficiency through scientific management, tap potential and increase revenue, and comprehensively improve the profitability of the original business; the second, sort out the business, reduce the business scale of regional platform with high risks, and insist on making progress while maintaining stability;

the third is to firmly promote the pace of strategic transformation of the company, promote the transformation of the project through innovative business models, expand the incremental market, expand the scale of business, look for new profit growth points, and provide a good foundation for the company's long-term stable development.

(2) Risks brought by transforming into new areas

In recent years, the company has fully promoted the strategic goal of transforming into a third-party integrated operation service provider in the jewelry industry, and many transformation projects have been implemented and achieved good results. However, in the process of deeply cutting into the jewelry industry, the company has become more and more aware of the difficulties and risks that will be faced in the transition to a new business area. Whether we can realize the innovative integration of the traditional characteristics of jewelry industry and the new technology and new model, how to meet the ever-changing individualized and diversified needs of emerging consumer groups, and how to make a path of innovative development in the industry environment with more fierce competition in market segment, these are all new challenges that the company needs to solve urgently and put forward higher requirements for the company's resource integration capabilities, project management capabilities and professional talent reserves in the transformation of business layout.

In response to this risk, on the one hand, the company will continue to strengthen the transformation conviction, in accordance with the established overall development strategy and business strategy, fully demonstrate, prudently make decisions, carry out fine management, make market-oriented operation, ensure that transformation projects achieve good investment returns, and actively respond to market competition; on the other hand, the company will steadily promote reform and innovation, and with the opportunity to complete the "Double Hundred Actions", explore and improve the company's long-term incentive mechanism, mobilize the enthusiasm of all employees, improve the management level and operational efficiency of the enterprise, and effectively enhance the core competitiveness of the enterprise.

Section IV. Corporate Governance

I. AGM and extraordinary general meeting

1. AGM held in the period

Meeting	Туре	Participation ratio for investors	Holding date	Disclosure date	Resolution
Annual General Meeting 2020	AGM	63.60%	2021-05-13	2021-05-14	Deliberated and approved the "Report of the BOD for year of 2020", "Report of the BOS for year of 2020", "Annual Report of 2020" and "Summary of Annual Report 2020" (domestic and foreign versions), "Profit Distribution Plan of 2020", "Final Account Report of 2020", "Financial Budget Report 2021", proposal to use the idle own funds to purchase bank financial products and proposal to apply for a bank credit line in 2021

2. Request for extraordinary general meeting by preferred stockholders with rights to vote

□ Applicable √ Not applicable

I. Major environmental protection

Listed Company and its subsidiary belong to the key pollution enterprise listed by Department of Environmental Protection \Box Yes \sqrt{No}

II. Social responsibility

During the reporting period, the Company digests the agricultural and sideline products in poor areas by means of purchase instead of donation, and opens up the sales channels of agricultural products by promoting support with consumption, and takes concrete actions to promote the economic improvement of poor areas effectively.

Section VI. Important Events

1. Commitments that the actual controller, shareholders, related party, buyers and the Company have fulfilled during the reporting period and those that have been overdue as of the end of the reporting period

☑Applicable □Not a	pplicable					
Commitments	Commitmen t party	Type of commitme nts	Content of commitments	Commitmen t date	Commitm ent term	Impleme ntation
Commitments make in initial public offering or re-financing	Shenzhen Tellus Holding Co., Ltd.	Other	The commitments to the fulfillment of information disclosure about the Company business development are as follows: except for the information has been disclosed publicly, the Company has not had the disclosed information about asset acquisition and business development that has not been disclosed within one year. In the future, the Company shall timely, accurately and adequately disclose the relevant information according to the progress of new business and the related requirements.	2014-10-17	Long-term	Impleme
Equity incentive commitment						
Other commitments for medium and small shareholders	Shenzhen Special Developmen t Group Co., Ltd.	Competiti	In order to avoid the horizontal competition, the Company's controlling shareholder, Shenzhen SDG has issued the "commitment letter about the avoidance of horizontal competition" on May 26, 2014. The full commitment letter is as follows: 1. The Company and other enterprises controlled by the Company except Tellus Group haven't occupied in any business that could substantially compete with the main businesses of Tellus Group, and have no horizontal competition relationship with Tellus Group.	2014-05-26	Long-term	Impleme nting
			From 2020 to 2022, the Company's profits will first be used to cover the losses of previous years; after making up for losses of previous years, in the premise that the Company's profits and cash flow can meet the Company's normal operations and long-term development, reward shareholders, the Company will implement positive profit distribution approaches to reward the	2020-04-02	2022-12-3	Impleme nting

shareholders, details are as follows: 1. The Company's profit distribution can adopt cash, stock or the combination of cash and stock or other methods permitted by law. The foreign currency conversion rates of domestically listed foreign shares dividend are calculated according to the standard price of HK dollar against RMB announced by People's Bank of China on the first working day after the resolution date of the shareholders' meeting.2. According to the "Company Law" and other relevant laws and the provisions of the of Association", Company's "Articles following conditions should be satisfied when the Company implements cash dividends: (1) the Company's annual distributable profits (i.e. the after-tax profits after making up for losses and withdrawing accumulation funds) are positive value, the implementation of cash dividends will not affect the Company's subsequent continuing operations; (2) the audit institution issues the standard audit report with clean opinion to the Company's annual financial report; (3) the Company has no significant investment plans or significant cash outlay (except for fund-raising projects). Major investment plans or significant cash outlay refer to: the accumulated expenditures the Company plans to used for investments abroad, acquisition of assets, or purchase of equipment within the next 12 months reach or exceed 30% of the net assets audited in the latest period. 3. In the premise of meeting the conditions of cash dividends and ensuring the Company's normal operation and long-term development, the Company makes cash dividends once a year in principle, the Company's board of directors can propose the Company to make interim cash dividends in accordance with the Company's profitability capital demand conditions. proportion of cash dividends in profits available for distribution and in distribution of profits should the following meet

requirements: (1) in principle, the Company's profits distributed in cash every year should not be less than 10% of profit available for distribution realized in the same year, and the Company's profits accumulatively distributed in cash in the last three years should not be less than 30% of the annual average profit available for distribution realized in the last three years. (2) if the Company's development stage belongs to mature stage and there is no significant capital expenditure arrangement, when distributing profits, the minimum proportion of cash dividends in this profit distribution should be 80%; (3) if the Company's development stage belongs to mature stage and there are significant capital expenditure arrangements, when distributing profits, the minimum proportion of cash dividends in this profit distribution should be 40%; (4) if the Company's development stage belongs to growth stage and there are significant capital expenditure arrangements, when distributing profits, the minimum proportion of cash dividends in this profit distribution should be 20%; when the Company's development stage is not easy to be differed but there are significant capital expenditure arrangements, please handle according to the preceding provisions. 4. On the condition of meeting the cash dividend distribution, if the Company's operation revenue and net profit grow fast, and the board of directors considers that the Company's equity scale and equity structure are reasonable, the Company can propose and implement the dividend distribution plans proposing the cash distribution plans. When allocating stock dividend every time, the stock dividend per 10 shares should be no less than 1 share. Stock allocation can be implemented individually or in combination of cash dividends. When confirming the exact amount of profit distribution by stock, the Company

			should fully consider if the general capital		
			after profit distribution by stock matches with		
			the Company's current operation scale and		
			profit growth rate and consider the impact on		
			future financing so as to make sure the		
			allocation plans meet the overall interests of		
			all shareholders.

Co., Ltd and Shenzhen Huari Toyota Automobile Sales Service Co., Ltd are included in the consolidate financial statement scope, found more in the explanation of Note 7 and Note 8 carried in the financial statement.

IV. Basis Preparation of the Financial Statements

1.Preparation base

Financial statement of the Company is prepared on a going concern basis.

2. Going concern

The Company does not have any events or circumstances that would cause significant doubt about its ability to continue as a going concern within 12 months from the end of the reporting period.

V.Important accounting policy & accounting estimation

Specific accounting policies and estimation attention:

Important tips: according to the characteristics of the actual production and operation, the Company formulated specific accounting policies and estimation for transactions or events such as impairment of financial instruments, depreciation of fixed assets, amortization of intangible assets and revenue recognition.

1. Statement of Compliance with the Accounting Standards for Business Enterprises

The financial statements prepared by the Company are in accordance to requirements of Accounting Standard for Business Enterprise, which truly and completely reflect the financial status of the Company, as well as the operation results and cash flows.

2. Accounting period

Accounting period of the Company is falls to the range starting from 1 January to 31 December.

3. Operating cycle

Operating cycle of the Company's business is relatively short, and 12 months is taken as the liquidity division standard of assets and liabilities.

4. Standard currency

The recording currency of the Company is Renminbi(RMB/CNY), and the foreign (branch) subsidiaries are recorded in the currency of the primary economic environment in which they operates.

5. Accounting treatment methods of business combination under the same control and not under the same control

(1) Business combination under the same control

The assets and liabilities acquired by the Company in the business combination shall be measured at the book value of the combined party in the consolidated financial statements of the final controlling party on the date of combination. Among them, if the accounting policies adopted by the combined party and the Company before the business combination are different, the accounting policies shall be unified based on the materiality principle, that is, the book value of the assets and liabilities of the combined party shall be adjusted according to the accounting policies of the Company. If there is a difference between the book value of the net assets acquired in the business combination and the book value of the consideration paid by the Company, the Company shall first adjust the capital reserve (capital premium or equity premium). If the balance of the capital reserve (capital premium or equity premium) is insufficient to offset, the surplus reserve and undistributed profit shall be offset successively.

For the accounting treatment of a business combination under the same control through step-by-step transactions, please see Notes V. 6 (6).

(2) Business combination not under the same control

The identifiable assets and liabilities of the acquiree acquired by the Company in the business combination shall

be measured at their fair value on the purchase date. Among them, if the accounting policies adopted by the acquiree and the Company before the business combination are different, the accounting policies shall be unified based on the materiality principle, that is, the book value of the assets and liabilities of the acquiree shall be adjusted according to the accounting policies of the Company. The difference between the combined cost of the Company on the acquisition date and the fair value of the identifiable assets and liabilities of the acquiree acquired by the purchaser in the business combination shall be recognized as goodwill; if the combined cost is less than the difference of fair value of the identifiable assets and liabilities of the acquiree acquired in the business combination, first of all, the combined cost and the fair value of the identifiable assets and liabilities of the acquiree acquired in the business combination shall be reviewed, after review, if the combined cost is still less than the fair value of the identifiable assets and liabilities of the acquiree, the difference shall be recognized as consolidated profits and losses for the current period.

For the accounting treatment of a business combination not under the same control through step-by-step transactions, please see Notes V. 6 (6).

(3) Disposal of transaction costs in business combination

The intermediary fees for auditing, legal services, evaluation and consultation and other related administrative expenses incurred for the business combination shall be recorded into the current profits and losses when incurred. Transaction costs of equity securities or debt securities issued as consideration for the merger are included in the initial recognition amount of the equity securities or debt securities.

6. Methods for preparation of consolidated financial statements

(1) Determination of the consolidated scope

The consolidated scope of the consolidated financial statements is determined on the basis of control, including not only subsidiaries as determined by voting rights (or similar voting rights) on their own or in combination with other arrangements, but also structured entities as determined by one or more contractual arrangements.

Control means that the Company has the power over the investee, enjoys variable returns by participating in related activities of the investee, and has the ability to use the power over the investee to influence the amount of return. A subsidiary is an entity under the control of the Company (including the separable part of an enterprise and an invested entity, and the structured entity controlled by the enterprise, etc.), a structured entity is one that is designed without taking the right to vote or similar rights as a determining factor when determining its controlling party (Note: sometimes it is also known as the entity of special purpose).

(2) Special provisions on the parent company being an investment entity

If the parent company is an investment entity, only those subsidiaries that provide relevant services for the investment activities of the investment entity will be included in the consolidation scope, and other subsidiaries will not be merged. Equity investors of the subsidiaries that are not included in the consolidation scope are recognized as financial assets measured at fair value and their changes are recorded in the profits and losses of

current period.

When the parent company simultaneously satisfies the following conditions, the parent company is an investment entity:

- ① The company obtains funds from one or more investors for the purpose of providing investment management services to investors.
- ② The sole purpose of the company's operation is to provide returns to investors through capital appreciation, investment income, or both.
- ③ The company considers and evaluates the performance of almost all investments in accordance with the fair value.

When the parent company changes from the non-investment entity into the investment entity, except only include the subsidiaries providing related services for their investment activities into the scope of consolidated financial statements, the company no longer merge other subsidiaries since the change day, and deal with according to the principle of disposing subsidiary equity but not losing the right of control.

When the parent company changes from the investment entity into the non-investment entity, the subsidiary originally not included in the scope of consolidated financial statements shall be included into the scope of consolidated financial statements on the change day, the fair value of the subsidiary originally not included in the scope of consolidated financial statements on the change day shall be regarded as the trading consideration of purchase, and deal with according to the accounting treatment method for business combination not under the same control.

(3) Preparation method of consolidated financial statements

The Company shall, on the basis of its own financial statements and those of its subsidiaries, prepare consolidated financial statements in accordance with other relevant information.

When preparing consolidated financial statements, the Company shall regard the entire enterprise group as an accounting entity, and reflect the overall financial position, operating results and cash flow of the enterprise group in accordance with the requirements of recognition, measurement and presentation of relevant accounting standards for enterprises, and in accordance with unified accounting policies and accounting periods.

- ① Merge the assets, liabilities, owners' equity, revenues, expenses and cash flows of the parent company and its subsidiaries.
- ② Offset the parent company's long-term equity investment in the subsidiary and the parent company's share in the owner's equity of the subsidiary.
- ③ Offset the impact of internal transactions between the parent company and its subsidiaries and among the subsidiaries. Where the internal transaction indicates the impairment loss of the relevant assets, the loss shall be recognized in full.
- 4 Adjust special transactions from the perspective of enterprise groups.

- (4) Disposal of increase or decrease in subsidiaries during the reporting period
- (1) Increase subsidiaries or businesses
- A. A subsidiary or business increased by the business merger under the same control
- (a) When preparing the consolidated balance sheet, the opening balance of the consolidated balance sheet shall be adjusted, and the relevant items in the comparative statement shall be adjusted, so that the consolidated reporting entity shall be deemed to have been in existence since the beginning of the control by the final controlling party.
- (b) When preparing the consolidated income statement, the revenues, expenses and profits of the subsidiary and its business combination from the beginning of the current period to the end of the reporting period shall be included in the consolidated income statement, and relevant items in the comparative statement shall be adjusted, so that the consolidated reporting entity shall be deemed to have been in existence since the beginning of the control by the final controlling party.
- (c) When preparing the consolidated cash flow statement, the cash flow of the subsidiary and the business combination from the beginning of the current period to the end of the reporting period shall be included in the consolidated cash flow statement, and the relevant items in the comparative statement shall be adjusted, so that the consolidated reporting entity shall be deemed to have been in existence since the beginning of the control by the final controlling party.
- B. A subsidiary or business added by a business combination not under the same control
- (a) The opening balance of the consolidated balance sheet shall not be adjusted when preparing the consolidated balance sheet.
- (b) When preparing the consolidated income statement, the income, expenses and profits of the subsidiary and the business from the purchase date to the end of the reporting period shall be included in the consolidated income statement.
- (c) When preparing the consolidated cash flow statement, the cash flow of the subsidiary from the purchase date to the end of the reporting period shall be included in the consolidated cash flow statement.
- 2 Disposal of subsidiaries or businesses
- A. The opening balance of the consolidated balance sheet shall not be adjusted when preparing the consolidated balance sheet.
- B. When preparing the consolidated income statement, the income, expenses and profits of the subsidiary and the business from the beginning of the period to the disposal date shall be included in the consolidated income statement.
- C. The cash flows of the subsidiary and the business from the beginning of the period to the disposal date shall be included in the consolidated cash flow statement when preparing the consolidated cash flow statement.
- (5) Special considerations in the merger offset
- ① The long-term equity investment of the Company held by a subsidiary shall be regarded as the treasury shares of the Company and listed as "deduct: treasury share" in the consolidated balance sheet under the owner's equity item as a deduction of the owner's equity. The long-term equity investments held by the subsidiaries shall offset

against their respective shares in the owner's equity of the subsidiaries in accordance with the method used by the Company to offset the equity investments in the subsidiaries.

- ② "Special reserve" and "general risk reserve" are not paid-up capital (or equity) or capital reserves, and are different from retained earnings and undistributed profits. After the long-term equity investment and the owner's equity of the subsidiary offset each other, the "special reserve" and "general risk reserve" shall be restored according to the share belonging to the owner of the parent company.
- ®Where the offsetting of unrealized internal sales gains and losses results in temporary differences between the carrying value of assets and liabilities in the consolidated balance sheet and the tax base of their taxable entity, the deferred income tax assets or deferred income tax liabilities shall be recognized in the consolidated balance sheet, at the same time, the income tax expenses in the consolidated income statement shall be adjusted, except for the deferred income taxes related to the transactions or events directly included in the owner's equity and the business combination.
- ①The profit and loss of the unrealized internal transaction incurred by the Company in selling assets to subsidiaries shall fully offset against the "net profit attributable to the owner of the parent company". The profit and loss of the unrealized internal transaction arising from the sale of assets by a subsidiary to the Company shall be distributed and offset between the "net profit attributable to the owner of the parent company" and the "minority shareholders' profit and loss" in accordance with the proportion distributed by the Company to the subsidiary. The profit and loss of the unrealized internal transaction arising from the sale of assets among subsidiaries shall be distributed and offset between "net profit attributable to the owner of the parent company" and "minority shareholders' profit and loss" in accordance with the distribution ratio of the Company to the subsidiaries of the seller.
- ⑤If the current loss shared by the minority shareholders of the subsidiary exceeds the minority shareholders' share in the initial owner's equity of the subsidiary, the balance shall still be offset against the shareholders' equity.
- (6) Accounting treatment of special transactions
- 1 Purchase minority shareholder equity

When the Company purchases the equity of a subsidiary owned by the minority shareholder of the subsidiary, the investment cost of the long-term equity investment newly acquired through the purchase of minority equity shall be measured according to the fair value of the consideration paid in individual financial statements. In the consolidated financial statements, the difference between the newly acquired long-term equity investment due to the purchase of a minority stake and the share of the net assets of the subsidiary calculated continuously from the purchase date or merger date according to the new shareholding ratio should adjust the capital reserves (capital premium or stock premium), if the capital reserves are insufficient to offset, the surplus reserves and undistributed profits shall be offset in turn.

- ② Obtaining the control of the subsidiary step by step through multiple transactions
- A. Realizing business combination under the same control step by step through multiple transactions

On the merger date, the Company shall determine the initial investment cost of long-term equity investment in the individual financial statements according to the share of the net assets of the subsidiaries that shall be enjoyed

after the merger in the book value of the consolidated financial statements of the ultimate controlling party; The difference between the initial investment cost and the book value of the long-term equity investment before the merger plus the book value of the new payment consideration for further shares acquired on the merger date shall adjust capital reserves (capital premium or stock premium), if the capital reserves are insufficient to offset, the surplus reserves and undistributed profits shall be offset in turn.

In the consolidated financial statements, the assets and liabilities of the merged party acquired by the merging party during the merger shall be measured according to the book value in the consolidated financial statements of the final controlling party on the merger date, except for the adjustments made due to different accounting policies; The difference between the sum of the book value of the investment held before the merger plus the book value of the consideration paid on the date of merger and the book value of the net assets acquired during the merger shall adjust the capital reserves (equity premium/capital premium), and adjust the retained earnings if the capital reserves are insufficient to offset.

Where the equity investment held by the merging party prior to the acquisition of control of the merged party are accounted for according to the equity method, the changes in relevant profit or loss, other comprehensive income and other owners' equity that has been recognized between the date on which the original equity was acquired and the date on which the merging party and the merged party are in the final control of the same party shall respectively offset against the retained earnings at the beginning of the comparative statement period.

B. Realization of business combination under different control step by step through multiple transactions. On the merger date, in the individual financial statements, the initial investment cost of the long-term equity investment on the merger date shall be the sum of the book value of the original long-term equity investment plus the new investment cost on the merger date.

In the consolidated financial statements, the equity of the acquiree held before the purchase date shall be re-measured according to the fair value of the equity on the purchase date, and the difference between the fair value and the book value shall be recorded into the investment income of the current period; If the equity held by the acquiree prior to the purchase date involves other comprehensive income under the equity method, the relevant other comprehensive income shall be converted to the current income on the purchase date, except other comprehensive income generated by the change in net assets or net liabilities of the benefit plan set by the merged party. In the notes, the Company shall disclose the fair value on the purchase date of the equity held by the company prior to the purchase date and the amount of relevant gains or losses generated by re-measurement in accordance with the fair value.

③ The Company disposes of its long-term equity investment in its subsidiaries without losing control
Where the parent company partially disposes of its long-term equity investment in a subsidiary without losing
control, in the consolidated financial statements, the difference between the disposal cost and the subsidiary's
share of the net assets calculated continuously from the purchase date or the merger date corresponding to the

disposal of the long-term equity investment shall adjust the capital reserves (capital premium or stock premium), if the capital reserves is insufficient to offset, adjust the retained earnings.

4 The Company disposes of its long-term equity investment in its subsidiaries and loses control

A. One transaction disposal

Where the Company loses the control of the investee due to the disposal of some equity investments and other reasons, the remaining equity shall be remeasured according to the fair value of the equity at the date of loss of control when the consolidated financial statements are prepared. The sum of the consideration obtained from the disposal of the equity and the fair value of the remaining equity minus the difference between the shares of the net assets of the original subsidiary which should be continuously calculated from the purchase date or merger date according to the original shareholding ratio shall be included into the investment income of the current period when the control right is lost.

Other comprehensive income and changes in other owners' equity related to the equity investment of the original subsidiary shall be transferred to the current profit and loss when the control right is lost, except other comprehensive income generated by changes in net liabilities or net assets of the benefit plan set by the investee.

B. Multiple transactions handled in steps

In the consolidated financial statements, we should first judge whether the step transaction is a "package transaction".

If the step transaction does not belong to the "package transaction", in the individual financial statements, each transaction before the loss of control of the subsidiary shall be carried forward with the book value of the long-term equity investment corresponding to the each disposal of equity, and the difference between the income price and the book value of the disposal of the long-term equity investment shall be included in the current investment income; In the consolidated financial statements, the relevant provisions of "the parent company disposes of its long-term equity investment in the subsidiary without losing control" shall be followed.

If the step transaction is a "package transaction", each transaction shall be accounted for as a transaction for the disposal of the subsidiary and loss of control; In the individual financial statements, the difference between each disposal price before the loss of control and the book value of the long-term equity investment corresponding to the disposed equity shall be first recognized as other comprehensive income, and then transferred to the current profit and loss of the lost control when the control right is lost; In the consolidated financial statements, for each transaction before the loss of control, the difference between the disposal price and the disposal investment corresponding to the share of the subsidiary's net assets shall be recognized as other comprehensive income, which shall be transferred to the profit and loss of the current period at the time of loss of control.

Multiple transactions are usually accounted for as "package transactions" where the terms, conditions and economic impact of the transactions meet one or more of the following conditions:

(a) The transactions were concluded at the same time or with consideration for their mutual impact.

- (b) The transactions as a whole are required to achieve a complete commercial outcome.
- (c) The occurrence of one transaction depends on the occurrence of at least one other transaction.
- (d) A transaction is not economic when considered in isolation, but it is economic when considered in conjunction with other transactions.
- ⑤ The proportion of equity owned by the parent company is diluted due to the capital increase by minority shareholders of subsidiary

The other shareholders (minority shareholders) of the subsidiary increase the capital of the subsidiary, thus diluting the shareholding ratio of the parent company to the subsidiary. In the consolidated financial statements, the share of the parent company in the book net assets of the subsidiary before the capital increase shall be calculated according to the proportion of the parent company's equity before the capital increase, and the difference between this share and the share of book net assets of the subsidiary after capital increase calculated according to the shareholding ratio of the parent company shall adjust the capital reserve (capital premium or stock premium), if the capital reserves is insufficient to offset, adjust the retained earnings.

7. Classification of joint venture arrangement and accounting for joint operations

The joint venture arrangement is an arrangement under the common control of two or more participants. Joint venture arrangement of the Company are classified as joint operations and joint ventures.

(1) Joint operations

The joint operation is a joint arrangement in which the Company enjoys the assets and bears the liabilities associated with such arrangement.

The Company recognizes the following items that related to its shares of interest in a joint operation and accounts for them in accordance with the provisions of the Accounting Standards for Business Enterprises (ASBE):

- ① To recognize separately-held assets and jointly-held assets under its proportion;
- 2To recognize separately-assumed liabilities and jointly-assumed liabilities under its proportion;
- To recognize revenue from disposal of the output which the Company is entitled to under the proportion;
- (4) To recognize revenue from disposal of the output under the proportion;
- ⑤To recognize separately occurred expenses, and to recognize expenses occurred for joint operations under its proportion.

(2) Joint venture

A joint venture is a joint venture arrangement in which the Company has rights only to the net assets of such arrangement.

The Company accounts for its investments in joint ventures in accordance with the regulations of the equity method of the long-term equity investment.

8. Recognition standards for cash and cash equivalents

Cash refers to the enterprise's cash on hand and deposits that are readily available for disbursement. The cash equivalents are investments that are held for a short period of time (generally maturing within three months from the date of purchase), are highly liquid, are easily convertible to known amounts of cash, and are subject to an insignificant risk of changes in value.

9. Foreign currency business and conversion of foreign currency statement

(1) Method of determining the conversion rate for foreign currency transactions

For the initial recognition of foreign currency transactions, the Company shall convert to the standard currency for accounting at the spot rate on the date of the transaction or at the exchange rate (hereinafter referred to as the approximate exchange rate of spot rate) determined in accordance with a systematic and reasonable method and similar to the spot rate on the date of the transaction.

(2) Conversion method of foreign currency monetary items on the balance sheet date

On the balance sheet date, the spot rate on the balance sheet date is used for conversion for foreign currency monetary items. The exchange difference resulting from the difference between the spot exchange rate on the balance sheet date and the spot exchange rate at the initial recognition or the previous balance sheet date shall be booked into the profit and loss of the current period. For foreign currency non-monetary items measured at historical cost, the spot exchange rate on the transaction date is still used for conversion; The foreign currency non-monetary items measured at fair value shall be converted at the spot exchange rate on the date on which the fair value is determined, and the difference between the amount of the standard currency for accounting after conversion and the amount of the original standard currency for accounting shall be recorded into the profits and losses of the current period.

(3) Conversion method of foreign currency statements

Adjust accounting periods and accounting policies of overseas operations before the conversion of the financial statements of enterprises' overseas operations, make it consistent with the accounting periods and accounting policies of the enterprise, and then prepare financial statements in corresponding currencies (currencies other than the standard currency for accounting) according to the adjusted accounting policies and accounting periods, and convert the overseas business financial statements according to the following methods:

- ①Spot exchange rate as of the balance sheet date is adopted for conversion of assets and liabilities in the balance sheet; as for the items in statement of owners' equity except for "Retained profit", conversion is made pursuant to the spot exchange rate of business day.
- ②items of income and expenses in the profit statement shall be converted at the spot exchange rate on the date of transaction or the approximate exchange rate translation of the spot rates.
- ③ Foreign currency cash flow and cash flow of overseas subsidiaries shall be converted by the spot exchange rate on the date of cash flow occurrence or an approximate exchange rate of spot exchange rate. The impact of

exchange rate changes on cash shall be presented separately in the statement of cash flows as an adjustment item.

①The balance generated from the conversion of foreign currency financial statements shall be separately presented as "other comprehensive income" under the owner's equity item in the consolidated balance sheet when preparing the consolidated financial statements.

When disposing of overseas operations and losing control of such operations, the balance of conversion of foreign currency statements related to such operations shown in the owner's equity item of the balance sheet shall be transferred into the disposal of current profits and losses in whole or in proportion to the disposal of such overseas operations.

10. Financial instruments

The financial instrument is a contract that forms a financial asset of one party and creates a financial liability or equity instrument of another party.

(1) Recognition and terminate of recognition for a financial instrument

When the Company becomes a party to a financial instrument contract, the relevant financial assets or liabilities are recognized.

A financial asset is terminate for recognition when one of the following conditions is met:

- ①the contractual rights to receive the cash flow of such financial assets are terminated:
- 2) the financial assets have been transferred and the following conditions for derecognition of transfer of such financial assets are met.

Where the current obligation of a financial liability (or any part thereof) has been terminated, the recognition of the financial liability (or the part of the financial liability) shall be terminated. If the Company (borrower) and the lender sign an agreement to replace the original financial liabilities by assuming new financial liabilities, and the contract terms of the new financial liabilities and the original financial liabilities are substantially different, the recognition of the original financial liabilities shall be terminated and the new financial liabilities shall be recognized at the same time. If the Company materially modifies the contract terms of the original financial liability (or any part thereof), the original financial liability shall be terminated, and at the same time a new financial liability shall be recognized in accordance with the modified terms.

Accounting recognition and termination of recognition are made on the trading day for buying and selling of financial assets in the normal way. Conventional buying and selling of financial assets means that the financial assets are delivered in accordance with the terms of the contract and on a schedule determined by regulation or market practice. "Trading day" means the date on which the Company commits to buy or sell financial assets.

(2) Classification and measurement of financial assets

In the initial recognition, the Company classifies the financial assets as financial assets measured at the amortized cost, financial assets measured at fair value and the changes are recorded into the profits and losses of the current financial assets, and financial assets measured at fair value and the changes are included in the financial assets of other comprehensive income according to the business model for managing financial assets and the contractual

cash flow characteristics of the financial assets. Financial assets shall not be reclassified after initial recognition unless the Company changes its business model for managing financial assets, in which case all affected relevant financial assets shall be reclassified on the first day of the first reporting period following the change in business model.

Financial assets are measured at fair value when they are initially recognized. For the financial assets measured at fair value and whose changes are included in the current profits and losses, the related transaction costs are directly included in the current profits and losses, and the related transaction costs of other types of financial assets are included in the initially recognized amount. For notes receivable and accounts receivable that are generated by the sale of goods or the rendering of services and do not include or take into account a material financing component, the Company will initially measure them in accordance with the transaction price as defined by the revenue standards.

Subsequent measurement of financial assets depends on their classification:

① Financial assets measured at amortized cost

Financial assets simultaneously meet the following conditions are classified as financial assets measured at amortized cost. The Company's business model for managing the financial assets is to collect contract cash flows; the contract terms of the financial assets stipulate that the cash flows generated at a specific date are only payment of principal and interest based on the amount of outstanding principal. For such financial assets, the effective interest method is used for follow-up measurement by the amortized cost, and its termination of recognition, and the profit or loss arising from amortization and impairment by the effective interest rate method are included in the profits and losses of the current period.

2 Financial assets measured at fair value and their changes are included in other comprehensive income

Financial assets simultaneously meet the following conditions are classified as financial assets measured at fair value and whose changes are included in other comprehensive income. The Company's business model for managing the financial assets is not only to collect contract cash flows but also to sell the financial asset; the contractual terms of the financial assets stipulate that the cash flows generated at a specific date are only payment of principal and interest on the amount of outstanding principal. For such financial assets, the fair value is used for subsequent measurement. Except the impairment loss or gain and the exchange gain or loss are recognized as current profits and losses, the changes in fair value of such financial assets are recognized as other comprehensive income until the termination of recognition of the financial assets, the accumulated gains or losses are transferred into the current profits and losses. However, the relevant interest income of the financial asset calculated by using the effective interest rate method is included in the profit and loss of the current period.

The Company irrevocably select part of non-transactional equity instrument investment to be designated as financial assets measured at fair value and whose changes are included in other comprehensive income, only the relevant dividend income is recorded into the profits and losses of the current period, fair value changes are

recognized as other comprehensive income, and the cumulative profits or losses are transferred into retained earnings until the termination of recognition of the financial assets.

③ Financial assets measured at fair value and whose changes are included in current profits and losses

Financial assets in addition to the above financial assets measured at amortized cost and financial assets measured at fair value and whose changes are included in other comprehensive income are classified as financial assets measured at fair value and whose changes are included in current profits and losses. For such financial assets, the fair value is used for subsequent measurement, and all changes in fair value are included in the current profits and losses.

(3) Classification and measurement of financial liabilities

The Company classifies the financial liabilities as financial liabilities measured at fair value and whose changes are included in the profits and losses of the current period, loan commitment and financial guarantee contract liabilities below market interest rate loans, and financial liabilities measured at amortized cost.

The subsequent measurement of a financial liability depends on its classification:

① Financial liabilities measured at fair value and whose changes are included in the profits and losses of the current period

Such financial liabilities include tradable financial liabilities (including derivatives belonging to financial liabilities) and financial liabilities designated to be measured at fair value and whose changes are included in current profits and losses. After initial recognition, the fair value is used for subsequent measurement for such financial liabilities. Except for those related to the hedge accounting, the profits or losses (including interest expense) generated are recorded into the current profits and losses. However, for the financial liabilities designated by the Company to be measured at fair value and whose changes are included in the profits and losses of the current period, the amount of changes in the fair value of the financial liabilities caused by changes in its own credit risk is included in other comprehensive income, at the termination of recognition of the financial liabilities, the accumulated gains and losses previously included in other comprehensive income shall be transferred from other comprehensive income and included in retained earnings.

2 Loan commitment and financial guarantee contract liabilities

A loan commitment is an undertaking provided by the Company to the customer to issue a loan to the customer within the commitment period on the terms of the established contract. The impairment loss of the loan commitment is set down in accordance with the expected credit loss model.

A financial guarantee contract is a contract that requires the Company to pay a specified amount of money to the contract holder who suffers a loss when the particular debtor is unable to pay the debt in accordance with the original or modified terms of the debt instrument at maturity. Financial guarantee contract liabilities shall be measured in accordance with the impairment principle of financial instruments determined in accordance with the loss provision and initial recognition of the amount of the balance of the accumulated amortization determined in

accordance with the income recognition principle.

3 Financial liabilities measured at amortized cost

After initial recognition, other financial liabilities are measured at amortized cost by using the effective interest rate method.

Except in special circumstances, financial liabilities and equity instruments are distinguished according to the following principles:

- ① A contractual obligation meets the definition of a financial liability if the Company cannot unconditionally refrain from performing it by paying cash or other financial assets. Although some financial instruments do not explicitly contain terms and conditions for the obligation to deliver cash or other financial assets, it is possible to indirectly form contractual obligations through other terms and conditions.
- ② If a financial instrument has to use or can use the Company's own equity instrument for settlement, consideration needs to be given to whether the Company's own equity instrument used to settle the instrument is to be used as a substitute for cash or other financial assets or to give the owner of the instrument a residual interest in the issuer's assets after all liabilities have been deducted. In the former case, the instrument is a financial liability of the issuer; In the latter case, the instrument is an equity instrument of the issuer. In some cases, a financial instrument contract requires that the Company has to use or can use its own equity instrument to settle the financial instrument, of which the amount of contractual rights or contractual obligations is equal to the number of its own equity instruments available or delivered multiplying its fair value at the settlement, no matter the amount of the contract rights or obligations are fixed or are based, in whole or in part, on changes in variables (such as interest rates, the price of a commodity or the price of a financial instrument) other than the market price of the Company's own equity instruments, the contract is classified as a financial liability.

(4) Derivative financial instruments and embedded derivative instruments

Derivative financial instruments are initially measured at the fair value of the date on which the derivative transaction contract is signed, and are subsequently measured at their fair value. A derivative financial instrument with a positive fair value is recognized as an asset; and a derivative financial instrument with a negative fair value is recognized as a liability.

Except the effective part of the hedge in the cash flow hedging is included in other comprehensive income and transferred out into the current profit and loss when the hedged item affects the profit and loss, the profit or loss generated by the change of the fair value of the derivative instrument shall be directly included in the profits and losses of the current period.

For hybrid instruments containing embedded derivatives, if the main contract is a financial asset, the hybrid instruments as a whole apply to the relevant provisions on the classification of financial assets. If the main

contract is not a financial asset, and the hybrid instruments are not measured at fair value and the changes are recorded into the current profits and losses for accounting treatment, the embedded derivatives have no close relationship with the main contract in economic characteristics and risks, and the instrument with the same conditions as the embedded derivatives and existing alone satisfies the definition of derivatives, the embedded derivatives shall be split from the hybrid instruments and handled as an individual derivative financial instrument. If the fair value of the embedded derivative on the acquisition date or on the subsequent balance sheet date cannot be measured separately, the hybrid instruments as a whole shall be designated as a financial asset or financial liability measured at fair value and whose changes are recorded in the profits and losses of the current period.

(5) Impairment of financial instruments

For financial assets measured at amortized cost, debt investment measured at fair value and whose changes are included in other comprehensive income, contract assets, lease receivables, loan commitments and financial guarantee contract, the Company recognizes loss provisions on the basis of expected credit losses.

① Measurement of expected credit losses

Expected credit loss refers to the weighted average of the credit loss of a financial instrument weighted by the risk of default. Credit loss refers to the difference between all contractual cash flows receivable under the contract and all cash flows expected to be received by the Company discounted at the original effective interest rate, namely, the present value of all cash shortfalls. Among them, the financial assets purchased or generated by the Company which have credit impairment shall be discounted according to the credit adjusted effective interest rate of the financial assets.

The expected credit loss over the entire duration refers to the expected credit loss due to all possible default events that may occur during the entire expected duration of a financial instrument.

Expected credit loss in the next 12 months refers to the expected credit loss resulting from the default event of a financial instrument that may occur within 12 months after the balance sheet date (or the expected duration if the expected duration of the financial instrument is less than 12 months), and is a part of the expected credit loss over the entire duration.

At each balance sheet date, the Company measures the expected credit losses of financial instruments at different stages of development separately. If the credit risk of the financial instrument has not increased significantly since the initial recognition, it shall be in the first stage and the Company shall measure the loss provisions according to the expected credit loss in the next 12 months; Where the credit risk of a financial instrument has increased significantly since the initial recognition but no credit impairment has occurred, the financial instrument shall be in the second stage, and the Company shall measure the loss provisions in accordance with the expected credit loss of the instrument throughout its lifetime; Where a financial instrument has suffered credit impairment since its initial recognition, it shall be in the third stage, and the Company shall measure the loss provisions in

accordance with the expected credit loss for the entire duration of the instrument.

For financial instruments with low credit risk at the balance sheet date, the Company assumes that the credit risk has not increased significantly since the initial recognition and measures the loss provisions in accordance with the expected credit loss in the next 12 months.

The Company calculates the interest income for financial instruments in the first and second stages and with low credit risk on the basis of their book balance and the actual interest rate without deduction of impairment provision. For a financial instrument in the third stage, the interest income is calculated on the basis of the book balance minus the amortized cost and the actual interest rate after the provision for impairment.

For notes receivable, accounts receivable, receivables financing and contractual assets, whether or not there is a significant financing component, the Company measures loss provisions in accordance with the expected credit losses over the entire duration.

A. Receivables/Contractual assets

For notes receivable, accounts receivable, other receivables, receivables financing, contract assets and long-term receivables that have objective evidence indicating the existence of impairment and are applicable to single evaluation, implement impairment test separately, recognize expected credit losses, and set aside single impairment reserves. For notes receivable, accounts receivable, other receivables, receivables financing, contractual assets and long-term receivables that have objective evidence of impairment, or when the single financial assets cannot assess the expected credit losses at reasonable costs, the Company divides notes receivable, accounts receivable, other receivables, receivables financing, contractual assets and long-term receivables into several portfolios based on credit risk characteristics, and calculates the expected credit loss on the basis of the portfolios, and the portfolio is determined on the following basis:

The basis for determining the portfolio of notes receivable is as follows:

Notes receivable portfolio 1 Commercial acceptance bill

Notes receivable portfolio 2 Bank's acceptance bill

For notes receivable divided into portfolios, the Company calculates the expected credit loss by referring to the historical credit loss experience, combining the current situation and the forecast of future economic conditions, and through default risk exposure and the expected credit loss rate of the entire duration.

The portfolio of accounts receivable is determined as follows:

Accounts receivable portfolio 1 Aging portfolio

Accounts receivable portfolio 2 Jewelry sales portfolio

For accounts receivable divided into portfolio, the Company refers to the historical credit loss experience,

combines the current situation and the forecast of the future economic situation, prepares a comparison table of the aging account receivable and the expected credit loss rate of the entire duration, and calculates the expected credit loss.

The portfolio of other receivables is determined on the following basis:

Other receivables portfolio 1 Interest receivable

Other receivables portfolio 2 Dividends receivable

Other receivables portfolio 3 Aging portfolio

Other receivables portfolio 4 Deposit receivable and cash deposit portfolio

Other receivables portfolio 5 Related portfolio within the consolidation scope of receivables

For other receivables divided into portfolios, the Company calculates the expected credit loss by referring to the historical credit loss experience, combining the current situation and the forecast of future economic conditions, and through default risk exposure and the expected credit loss rate within the next 12 months and over the entire duration.

The basis for determining the portfolio of long-term receivables is as follows:

Long-term receivables portfolio 1 Other receivables

For the long-term receivables divided into Portfolio 1, the Company calculates the expected credit loss by referring to the historical credit loss experience, combining the current situation and the forecast of future economic conditions, and through default risk exposure and the expected credit loss rate over the entire duration.

B. Bond investment and other bond investment

With respect to bond investments and other bond investments, the Company calculates the expected credit losses in accordance with the nature of the investment and the various types of counterparties and risk exposures and the expected credit loss rates in the next 12 months or over the entire duration.

2 Low credit risk

If a financial instrument has low credit risk, the the borrower has a strong ability to fulfill its contractual cash flow obligations in the short term, and even adverse changes in the economic situation and operating environment over a longer period may not necessarily reduce the borrower's ability to fulfill its contractual cash flow obligations, the financial instrument shall be regarded as a lower credit risk.

③ Credit risk increases significantly

The Company determines the relative changes in the probability of default over the expected duration of a financial instrument and evaluates whether the credit risk of the financial instruments has increased significantly since the initial recognition by comparing the probability of default over the expected duration of a financial instrument as determined at the balance sheet date and the probability of default over the expected duration as determined at the time of initial recognition.

When determining whether the credit risk has increased significantly since the initial recognition, the Company considers reasonable and evidence-based information, including forward-looking information, that is available without unnecessary additional cost or effort. Information considered by the Company includes:

- A. Whether the internal price index has changed significantly due to the change of credit risk;
- B. Adverse changes in business, finance or economic conditions that are expected to result in a significant change in the ability of the debtor to meet its debt service obligations;
- C. Whether there is an actual or expected significant change in the debtor's operating results; Whether there has been a significant adverse change in the regulatory, economic or technological environment of the debtor;
- D. Whether there has been a significant change in the value of the collateral secured as collateralized debt obligations or in the quality of the guarantees or credit enhancements provided by third parties. These changes are expected to reduce the economic incentive of the debtor to repay within the contractual period or affect the probability of default;
- E. Whether there are significant changes in the economic incentives that are expected to reduce the economic incentive of the debtor to repay within the contractual period;
- F. Expected changes in the loan contract include whether an anticipated breach of contract might result in exemption or revision of contractual obligations, grant of interest free periods, jump in interest rates, request for additional collateral or guarantee, or other changes to the contractual framework of the financial instrument;
- G. Whether there is a significant change in the debtor's expected performance and repayment behavior;
- H. Whether the contract payment is overdue for more than (including) 30 days.

Based on the nature of the financial instruments, the Company assesses whether the credit risk has increased significantly on the basis of individual financial instruments or a portfolio of financial instruments. When assessing on the basis of a portfolio of financial instruments, the Company may classify the financial instruments based on common credit risk characteristics, such as overdue information and credit risk ratings.

Typically, if it is overdue for more than 30 days, the Company determines that the credit risk of financial instruments has increased significantly. Unless the Company does not need to pay too much cost or effort and can obtain reasonable and well-founded information, which demonstrates that although the payment is overdue for 30 days, the credit risk has not been significantly increased since the initial recognition.

(4) Financial assets whose credit impairment has occurred

On the balance sheet date, the Company assesses whether credit impairment has occurred in the financial assets measured at amortized cost and the debt investment measured at fair value and the changes of which are included in other comprehensive income. When one or more events that have an adverse effect on the expected future cash flow of a financial asset occur, the financial asset becomes a financial asset whose credit impairment has occurred. Evidence indicating that a credit impairment has occurred on a financial asset includes the following observable information:

The creditor, for economic or contractual reasons relating to the debtor's financial difficulties, gives the debtor concessions that would not have been made in any other circumstances; The issuer or the debtor has significant financial difficulties; The debtor breaches the contract, such as default or overdue payment of interest or principal; The creditor, for economic or contractual reasons relating to the debtor's financial difficulties, gives the debtor concessions that would not have made in any other circumstances; The debtor is likely to go bankrupt or undergo other financial restructuring; The financial difficulties of the issuer or debtor lead to the disappearance of the active market for the financial asset; Purchase or originate a financial asset at a substantial discount that reflects the fact that a credit loss has occurred.

⑤ Presentation of provisions for expected credit losses

In order to reflect the change of the credit risk of financial instruments since the initial recognition, the Company shall re-measure the expected credit loss on each balance sheet date, and the resulting increase or reversal amount of the loss provisions shall be recorded into the current profit and loss as impairment loss or gain. For a financial asset measured at amortized cost, the loss provision is offset against the carrying value of the financial asset as shown in the balance sheet; For a debt investment measured at fair value and whose changes are included in other comprehensive income, the Company shall recognize its loss provision in other comprehensive income and shall not offset the carrying value of the financial asset.

(6) Write-off

If the Company no longer reasonably expects the contract cash flow of the financial asset to be recovered in whole or in part, the book balance of the financial asset shall be written down directly. Such write-down constitutes the termination of recognition of the underlying financial asset. This usually occurs when the Company determines that the debtor has no assets or sources of income which will generate sufficient cash flow to repay the amount to be written down.

If the write-down financial asset is recovered later, the impairment loss shall be reversed and included in the profits and losses of the recovery period.

(6) Transfer of financial assets

Transfer of financial assets refers to the following two situations:

- A. Transfer the contractual right to receive the cash flow of the financial asset to another party;
- B. Transfer the financial asset in whole or in part to another party, but retain the contractual right to receive the cash flow of the financial asset and the contractual obligation to pay the cash flow received to one or more payees.

1) Terminate the recognition of transferred financial assets

Where almost all risks and rewards of ownership of a financial asset have been transferred to the transferee, or almost all risks and rewards of ownership of a financial asset have been neither transferred nor retained, but the control over the financial asset has been relinquished, recognition of the financial asset shall be terminated.

When judging whether the control of the transferred financial asset has been given up, based on the actual ability of the transferee to sell the financial asset, if the transferee can unilaterally sell the transferred financial asset as a whole to an unrelated third party with no additional conditions restricting such sale, it means that the Company has given up its control over the financial asset.

The Company pays attention to the essence of financial asset transfer when judging whether the transfer of financial assets meets the conditions for the termination of recognition of financial asset.

Where the overall transfer of financial assets meets the conditions for termination of recognition, the difference between the following two amounts shall be recorded into the profits and losses of the current period:

A. Book value of the transferred financial assets;

B.The sum of the consideration received due to the transfer and the amount for the termination of recognition part in the cumulative amount of changes in fair value directly included in other comprehensive income (The financial assets involved in transfer are financial assets that are measured at fair value and their changes are included in other comprehensive income according to Article 18 of Accounting Standards for Business Enterprises No. 22 - Recognition and Measurement of Financial Instruments).

When the partial transfer of a financial asset meets the criteria for recognition of termination, the entire book value of the transferred financial asset shall be apportioned between the portion whose recognition is terminated and the portion whose recognition is not terminated (in this case, the reserved service assets shall be regarded as a part of the financial assets continued to be recognized) in accordance with the respective relative fair value on the transfer day, and the balance between the following two amounts shall be recorded into the profits and losses of the current period:

- A. Book value of the portion whose recognition is terminated on the date of termination of recognition;
- B. The sum of the consideration of the portion whose recognition has been terminated and the amount for the termination of recognition part in the cumulative amount of changes in fair value directly included in other comprehensive income (The financial assets involved in transfer are financial assets that are measured at fair value and their changes are included in other comprehensive income according to Article 18 of Accounting Standards for Business Enterprises No. 22 Recognition and Measurement of Financial Instruments).

(2) Continued involvement in the transferred financial assets

Where almost all the risks and rewards of ownership of the financial asset are neither transferred nor retained, control over the financial asset has not been relinquished, the relevant financial asset shall be recognized in accordance with the extent of its continued involvement in the transferred financial asset and the relevant liabilities shall be recognized accordingly.

The extent of continued involvement in the transferred financial assets refers to the extent to which the enterprise bears the risk or reward of changes in the value of the transferred financial assets.

3 Continue to recognize the transferred financial assets

Where almost all the risks and rewards of the ownership of the transferred financial asset are still retained, the transferred financial asset as a whole shall continue to be recognized and the consideration received shall be recognized as a financial liability.

The financial assets and the relevant financial liabilities recognized shall not offset each other. In the subsequent accounting period, the enterprise shall continue to recognize the income (or gain) generated by the financial asset and the expense (or loss) generated by the financial liability.

(7) Offset of financial assets and financial liabilities

Financial assets and financial liabilities shall be shown separately in the balance sheet and should not be set off against each other. However, if the following conditions are met at the same time, the net amount after mutual offset shall be presented in the balance sheet:

The Company has the legal right to offset the recognized amount, and such legal right is currently enforceable;

The Company plans a net settlement, or cashes the financial asset and liquidates the financial liability at the same time.

If the transfer of financial assets does not meet the conditions for termination of recognition, the transferring party shall not offset the transferred financial assets and related liabilities.

(8) Determination method of the fair value of financial instruments

Fair value refers to the price that the market participants can receive by selling an asset or need to pay for transferring a liability in orderly transactions occurred on the measurement day.

The Company measures the fair value of the relevant assets or liabilities at the prices in the main market. If there is no main market, the Company measures the fair value of the relevant assets or liabilities at the prices in the most favorable market. The Company adopts the assumptions used by market participants in pricing such asset or liability in order to maximize their economic benefits.

The main market refers to the market with the largest trading volume and the highest trading activity degree of related assets or liabilities. The most favorable market refers to the market in which the relevant assets can be sold for the highest amount or the related liabilities can be transferred for the lowest amount after considering transaction costs and transportation costs

For financial assets or financial liabilities with active market, the Company determines their fair value by using quotations in active market. Where there is no active market for financial instruments, the Company shall use valuation techniques to determine their fair value.

If non-financial assets are measured at fair value, the ability of market participants to produce economic benefits

by using the assets for the best use, or the ability to produce economic benefits by selling the assets to other market participants who can use the assets for the best use shall be considered.

① Valuation technique

The Company adopts the valuation techniques applicable to the current situation and supported by sufficient available data and other information. The valuation techniques used mainly include the market method, the revenue method and the cost method. The Company uses the method consistent with one or multiple valuation techniques to measure the fair value. If multiple valuation techniques are used to measure the fair value, the Company shall consider the rationality of the valuation results and select the amount that best represents the fair value in the current situation as the fair value.

The Company prioritizes the use of relevant observable inputs in the application of valuation techniques, and uses unobservable inputs only when relevant observable inputs cannot be obtained or are not feasible to obtain. Observable input values are those that can be obtained from market data. The input value reflects the assumptions used by market participants in pricing the underlying asset or liability. Unobservable input values are those that cannot be obtained from market data. The input value is derived from the best available information about the assumptions used by market participants in pricing the underlying asset or liability.

② Fair value levels

The Company divides the input value used for fair value measurement into three levels, and uses the input value of the first level first, and then uses the input value of the second level, and the input value of the third level last. The first-level input values are the unadjusted quotations in the active market for the same asset or liability that can be obtained at the measurement date. The second-level input values are the directly or indirectly observable input values of the underlying asset or liability in addition to the first-level input values. The third-level input values are the unobservable input values of the underlying asset or liability.

11. Inventory

(1)Classification

Inventory includes finished products or commodities held for sale in daily activities, products in the production process, materials and supplies consumed in the production process or the process of providing labor services, etc., including raw materials, inventory goods, goods sold on consignment and working capital materials.

(2) Valuation methods for delivery of inventory

The delivery of inventory shall be priced individually on a first-in, first-out basis.

(3) Inventory system

Inventory of the Company is inventoried on a perpetual basis. And the inventory is taken at least once a year and amount of gains/losses is recognized in gains/losses for the year.

(4) How to set aside the inventory write down

On the balance sheet date, it shall be measured at the lower of cost and net realizable value. If the inventory cost is higher than the net realizable value, set aside the inventory write down and record it into the profit and loss of the current period.

The net realizable value of the inventory shall be determined on the basis of reliable evidence obtained, and factors such as the purpose for which the inventory is held and the impact of events after the balance sheet date shall be taken into account.

- ① The net realizable value of the inventory directly used for sale, such as finished products, commodities and materials for sale, shall be determined in the normal process of production and operation by deducting the estimated selling cost and relevant taxes from the estimated selling price of the inventory. For inventories held for the execution of sales contracts or service contracts, the contract price shall be used as the measurement basis for the net realizable value; If the quantity of inventory held exceeds the quantity ordered under the sales contract, the net realizable value of the excess inventory shall be measured on the basis of the general sales price. The market price shall be used as the measurement basis for the net realizable value of the materials for sale, etc.
- ② The net realizable value of the inventory of materials to be processed is determined by the amount after deducting the estimated cost, estimated selling expenses and relevant taxes and fees at the time of completion from the estimated selling price of the finished products. If the net realizable value of the finished product produced by it is higher than the cost, the material shall be measured at cost; If the decline in the price of a material indicates that the net realizable value of the finished product is less than the cost, the material is measured at the net realizable value and inventory write down is set aside based on the difference.
- ③ The reserve for inventory write down is generally set aside as a single inventory item. For the inventory with large quantity and low unit price, it shall be set aside by inventory type.
- ④ On the balance sheet date, if the influencing factors of the previous write-down of the inventory value have disappeared, the write-down amount shall be restored, and the amount shall be reversed within the original amount of the inventory write down, and the reversed amount shall be recorded into the profits and losses of the current period.

12. Contractual assets and liabilities

The Company lists contractual assets or contractual liabilities in the balance sheet based on the relationship between performance obligations and customer payments. The consideration to which the Company is entitled to receive for the goods or services it has transferred to the customer (and the right depends on factors other than the passage of time) is listed as contractual assets. The company's obligations to transfer goods or provide services to

customers for which consideration has been received or receivable are listed as contractual liabilities.

The Company's determination method and accounting treatment method on expected credit loss of contract assets are detailed in Notes V. 10.

Contractual assets and contractual liabilities shall be listed separately in the balance sheet. The contractual assets and contractual liabilities under the same contract are listed as net amount. If the net amount is the debit balance, it shall be listed under the item "Contractual Assets" or "Other Non-current Assets" according to its liquidity; If the net amount is the net credit balance, it shall be listed under the "Contractual Liabilities" or "Other Non-current liabilities" according to its liquidity. Contractual assets and contractual liabilities under different contracts cannot offset each other.

13. Contract cost

Contract cost is divided into contract performance cost and contract acquisition cost.

The cost incurred by the Company for the performance of the contract is recognized as an asset as the performance cost of the contract when the following conditions are met simultaneously:

- ① The cost is directly related to a current or expected contract, including direct labor, direct materials, manufacturing expenses (or similar expenses), costs expressly borne by the customer and other costs incurred solely as a result of the contract.
- ② This cost increases the Company's resources for future performance obligations.
- ③ The cost is expected to be recouped.

If the incremental cost incurred by the Company to acquire the contract is expected to be recovered, it shall be recognized as an asset as the contract acquisition cost.

Assets related to contract costs are amortized on the same basis as revenue recognition for the goods or services related to the assets, however, if the amortization period of the contract acquisition cost does not exceed one year, the Company will record it into the current profit and loss when it occurs.

If the carrying value of the assets related to the contract cost is higher than the difference between the following two items, the Company will set aside impairment reserves of the excess part and recognize it as impairment loss of the asset, and further consider whether to set aside provision for the expected liabilities related to the loss contract:

- ① The remaining consideration expected to be obtained from the transfer of goods or services related to the asset;
- ② Cost estimated to be incur for transferring the related goods or services.

If the aforesaid asset impairment provision is subsequently reversed, the carrying value of the asset after the reversal shall not exceed the carrying value of the asset on the reversal date under the assumption that no impairment provision is made.

Contract performance costs recognized as assets whose amortization period at the initial recognition does not exceed one year or one normal operating cycle shall be listed in the item "Inventory", and those whose amortization period at the initial recognition exceed one year or one normal operating cycle shall be listed in the item "Other Non-current Assets".

Contract acquisition costs recognized as assets whose amortization period at the initial recognition does not exceed one year or one normal operating cycle shall be listed in the item "Other Current Assets", and those whose amortization period at the initial recognition exceeds one year or one normal operating cycle shall be listed in the item "Other Non-current Assets".

14. Non-current assets or disposal groups held-for-sale

(1)Classification of non-current assets or disposal groups held for sale

The Company classifies non-current assets or disposal groups that meet all of the following conditions as held-for-sale:

- ①according to the practice of selling this type of assets or disposal groups in a similar transaction, the non-current assets or disposal group can be sold immediately at its current condition;
- ②The sale is likely to occur, that is, the Company has made resolution on the selling plan and obtained definite purchase commitment, the selling is estimated to be completed within one year. Those assets whose disposal is subject to approval from relevant authority or supervisory department under relevant requirements are subject to that approval.

The non-current assets or disposal group acquired by the company specifically for resale shall be classified as held for sale on the date of acquisition if meets the condition of "expected to complete the sale within one year" on the acquisition date, and is likely to meet other classification conditions of held for sale in the short term (usually 3 months).

Where the Company loses control over its subsidiary due to disposal of investment in the subsidiary, whether or not the Company retains part equity investment after such disposal, investment in the subsidiary shall be classified in its entirety as held for sale in the separate financial statement of the parent company subject to that the investment in the subsidiary proposed to be disposed satisfies the conditions for being classified as held for sale, and all the assets and liabilities of the subsidiary shall be classified as held for sale in consolidated financial statement.

(2) Measurement of non-current assets held for sale or disposal group

The investment real estate by using fair value model for subsequent measurement, the biological assets measured

at net amount after fair value minus sale cost, the assets formed by employee compensation, the deferred income tax assets, the financial assets specified by related accounting standards of financial instruments and the measurements of the rights generated by the insurance contract specified by related accounting standards of insurance contract respectively apply to other related accounting standards.

When initially measuring or remeasuring the non-current assets held for sale or disposal group on the balance sheet date, if its book value is higher than the net amount after the fair value minus the sale cost, book value will be written down to the net amount after the fair value minus the sale cost, the write-down amount shall be recognized as asset impairment loss and included in the current profits and losses, and the impairment reserves held for sale shall be set aside at the same time. On the subsequent balance sheet date, if the net amount of the fair value of the non-current assets or disposal group held for sale increases after subtracting the selling expenses, the previously written-down amount shall be recovered and reversed within the amount of the asset impairment losses recognized as non-current assets after being classified as held for sale, and the reversed amount is included in the current profits and losses. The carrying amount of goodwill that has been offset is not recovered.

When non-current assets or disposal groups no longer continue to be classified as held for sale as they no longer meet the classification conditions of the held for sale category or non-current assets are removed from the held for sale disposal group, measure based on the lower of the following two:

- ①Book value before being classified as held for sale, the amount adjusted according to the depreciation, amortization, or impairment that should have been recognized under the assumption that it is not classified as held for sale;
- (2) Recoverable amount.

(3) Presentation

In the balance sheet, the Company lists non-current assets held for sale or assets in the disposal group held for sale separately from other assets, and lists liabilities in the disposal group held for sale separately from other liabilities. Non-current assets held for sale or assets in the disposal group held for sale and liabilities in the disposal group held for sale do not offset each other and are listed as current assets and current liabilities respectively.

15. Long-term equity investment

The long-term equity investment of the Company includes the equity investment which controls and has a significant impact on the investee and the equity investment in the joint venture. If the Company is able to exert significant influence on the invested entity, it shall be an associate enterprise of the Company.

(1) Basis for determining the joint control and significant impact on the investee

Joint control refers to the common control of an arrangement according to relevant agreements, and relevant activities of the arrangement must be agreed upon by all the participants who share the control right. When judging whether there is joint control, first judge whether all participants or participant portfolios collectively control the arrangement. If all participants or a group of participants must act in concert to determine the relevant

activities of an arrangement, then all participants or a group of participants are considered to collectively control the arrangement. Secondly, it will judge whether the decision of the activities related to the arrangement must be agreed by the participants who collectively control the arrangement. If two or more participant portfolios can collectively control an arrangement, it does not constitute joint control. The existence of joint control is judged without regard to the protective rights enjoyed.

Significant impact means that the investor has the right to participate in the decision-making of the financial and operational policies of the investee, but cannot control or jointly control the formulation of these policies with other parties. When determining whether it can exert a significant impact on the investee, it shall consider the impact of the voting shares directly or indirectly held by the investor and the potential voting rights of the investor and other parties in the current period assumed to be converted into the equity of the investee, including the impact of current convertible warrants, stock options and convertible corporate bonds issued by the investee.

When the Company owns more than 20% (including 20%) but less than 50% of the voting shares of the investee directly or indirectly through its subsidiaries, it is generally considered to have a significant impact on the investee, unless there is clear evidence that it cannot participate in the production and operation decisions of the investee under such circumstances, it shall not have a significant impact.

- (2) Recognition of initial investment cost
- ①Investment cost of the long-term equity investment resulting from enterprise combination is recognized in accordance with the following provisions:
- A. In the case of a business combination under the same control, if the combining party pays cash, transfers non-cash assets or assumes debts as the merger consideration, the share of the book value of the acquired owner's equity of the combined party in the consolidated financial statements of the ultimate controlling party shall be used as its initial investment cost. The difference between the initial investment cost of long-term equity investment and the carrying amount of cash paid, non-cash assets transferred and liabilities assumed is adjusted to capital reserves; if the capital reserves is not sufficient to offset the difference, retained earnings is adjusted.
- B. For a business combination under the same control, where the merging party issues equity securities as the merger consideration, the initial investment cost of the long-term equity investment shall be the share of the book value of the owner's equity of the merged party in the consolidated financial statements of the final controlling party on the merger date. The capital reserves shall be adjusted according to the difference between the initial investment cost of a long-term equity investment and the total par value of the issued shares; if the capital reserves are insufficient to offset, the retained earnings shall be adjusted;
- C. For a business combination not under the same control, the fair value of the assets paid, liabilities incurred or assumed and equity securities issued on the purchase date in order to acquire the control of the acquiree determines the merger cost as the initial investment cost of long-term equity investment. The intermediary fees for auditing, legal services, evaluation and consultation and other related administrative expenses incurred by the merger party shall be recorded into the profits and losses of the current period when incurred.

2 Except for the long-term equity investment formed by enterprise merger, the investment cost of the long-term equity investment obtained by other means shall be determined in accordance with the following provisions:

A. For long-term equity investment acquired by paying cash, the actual purchase price paid is regarded as the investment cost. Initial investment cost includes expenses, taxes and other necessary expenses directly related to the acquisition of long-term equity investment.

B. For long-term equity investment acquired by issuing equity securities, the fair value of issuing equity securities is regarded as the investment initial investment cost.

C. For long-term equity investment acquired by the exchange of non-monetary assets,

if the exchange is of a commercial nature and the fair value of the assets received or surrendered can be reliably measured, the fair value of the assets surrendered and the relevant taxes and fees shall be taken as the initial investment cost, and the difference between the fair value and the book value of the assets surrendered shall be included in the current profits and losses. If the exchange of non-monetary assets does not meet the above two conditions at the same time, the book value of the assets surrendered and relevant taxes and fees shall be taken as the initial investment cost.

D. For long-term equity investment acquired through debt restructuring, its entry value shall be determined by the fair value of the abandoned creditor's rights and the taxes and other costs directly attributable to the asset, and the difference between the fair value of the abandoned creditor's rights and the carrying value shall be recorded into the current profits and losses.

(3) Methods of subsequent measurement and profit and loss recognition

The long-term equity investment that the Company can control over the invested unit shall use cost method for business accounting; Long-term equity investments in joint ventures and cooperative enterprises shall use equity method for business accounting.

(1) Cost method

For the long-term equity investment uses cost method for business accounting, the cost of the long-term equity investment shall be adjusted when the investment is added or recovered; Cash dividends or profits declared to be distributed by the invested entity shall be recognized as current investment income.

2 Equity method

The general accounting treatment for long-term equity investments using equity method for business accounting is as follows:

If the investment cost of the Company's long-term equity investment is greater than the fair value share of the

identifiable net assets of the invested entity, the initial investment cost of the long-term equity investment shall not be adjusted; If the initial investment cost of the long-term equity investment is less than the fair value share of the identifiable net assets of the invested entity at the time of investment, the difference shall be recorded into the current profits and losses, and the cost of the long-term equity investment shall be adjusted at the same time.

The Company recognizes investment income and other comprehensive income respectively according to the share of net profit and loss realized by the invested entity and other comprehensive income which the Company shall enjoy or share, and adjusts the book value of long-term equity investment at the same time; The Company calculates its share based on the profits or cash dividends declared and distributed by the invested entity and reduce the book value of the long-term equity investment accordingly; The book value of the long-term equity investment shall be adjusted based on other changes in the owner's equity other than the net profit or loss, other comprehensive income and profit distribution of the invested entity, and recorded into the owner's equity. When recognizing the share of the net profit or loss of the invested entity, the fair value of the identifiable net assets of the invested entity at the time of acquiring the investment shall be taken as the basis, and the net profit of the invested entity shall be recognized after adjustment. If the accounting policies and accounting periods adopted by the invested entity are inconsistent with those of the Company, the financial statements of the invested entity shall be adjusted in accordance with the accounting policies and accounting periods of the Company, and the investment income and other comprehensive income shall be recognized on the basis thereof. The part of profit and loss of the unrealized internal transactions between the Company and the associated enterprises and joint ventures which is attributable to the Company by calculating according to the proportion enjoyed shall be set off, and the investment profit and loss shall be recognized on this basis. If the loss of unrealized internal transaction between the Company and the invested entity belongs to impairment loss of assets, it shall be recognized in full.

If the company is able to exert significant influence or implement joint control on the investee due to additional investment and other reasons, which does not constitute control, the fair value of the original equity investment plus the new investment cost shall be taken as the initial investment cost according to the equity method. If the previously held equity investment is classified as other equity instrument investment, the difference between its fair value and book value, as well as the accumulated gains or losses originally included in other comprehensive income shall be transferred from other comprehensive income and included in retained earnings in the current period when changing to use equity method for accounting.

Where the joint control or significant influence on the invested unit is lost due to the disposal of some equity investments, the remaining equity after disposal shall be measured by the fair value, and the difference between the fair value and the book value on the date of the loss of joint control or significant influence shall be recorded into the current profits and losses. Other comprehensive income of the original equity investment recognized by using the equity method for accounting adopts the same basis as the direct disposal of related assets or liabilities by the invested entity for accounting treatment when the equity method is discontinued.

(4) Equity investments held for sale

Where the equity investment of a joint venture or associated enterprise is classified in whole or in part as assets held for sale, see Notes V. 14 for relevant accounting treatment.

For the remaining equity investment not classified as assets held for sale, the equity method is used for accounting treatment.

If an equity investment in a joint venture or associated enterprise that has been classified as assets held for sale no longer meets the classification conditions for assets held for sale, it shall be retroactively adjusted by using the equity method from the date when it is classified as assets held for sale. The financial statements for the period classified as held for sale are adjusted accordingly.

(5) Impairment test method and impairment reserve calculation method

For the investment of a subsidiary, associated enterprise or joint venture, see Notes V. 20 for the method of setting aside the impairment of assets.

16. Investment real estate

(1) Category of investment real estate

The investment real estate is the real estate that held to earn rents or for capital appreciation, or both. Mainly includes:

- ①Leased land use rights.
- ②Land use rights held and ready to be transferred after appreciation.
- ③Leased buildings

(2) Measurement of investment real estate

The Company adopts the cost model to carry out follow-up measurement of investment real estate, see Note V. 20 for the method of setting aside the impairment of assets.

After deducting the accumulated impairment and net residual value of the investment real estate cost, the Company calculates the depreciation or amortization by the straight-line method. The categories of the investment real estate, the estimated economic useful life and the estimated net residual value rate determine the depreciation life and the annual depreciation rate as follows:

Category	Years of depreciation(year)	Scrap value rate(%)	Yearly depreciation rate(%)
House and buildings	35-40	3	2.77-2.43
Land use right	50	_	2.00

16. Fixed assets

Fixed assets are the tangible assets with a high unit value that are held for good production, provision of service, rental or operation management with a useful life of more than one year.

(1) Recognition

Fixed assets are recognized at their actual cost at the time of acquisition when both of the following conditions are met:

- ①the economic benefits associated with the fixed assets are likely to flow into the enterprise.
- 2 cost of the fixed assets can be measured reliably.

If the subsequent expenditure incurred for fixed assets that meet the conditions for recognition of fixed assets are included in the costs of fixed assets; those that qualify for recognition as fixed assets are recognized in current gain/loss.

(2) Depreciation methods for various type of fixed assets

The Company depreciates the fixed assets on an average annual basis from the month following the date when the fixed assets reach their intended usable condition. The year of depreciation and annual depreciation rates are determined by the category of fixed assets, estimated economic useful lives and estimated net salvage rates respectively are as:

Category	Method	Years of	Salvage rates	Annual depreciation rates
		depreciation(Year)	(%)	(%)
House and buildings	Straight-line	10、35-40	0, 3	2.43-2.77、10.00
	depreciation			
Including: owned house	Straight-line	10	0	10.00
renovation	depreciation			
Machinery equipment	Straight-line	12	3	8.08
	depreciation			
Transport equipment	Straight-line	7	3	13.86
	depreciation			
Electronic equipment	Straight-line	5-7	3	13.86-19.40
	depreciation			
Office and other equipment	Straight-line	7	3	13.86
	depreciation			

As for the fixed assets with impairment accrual, the provision for impairment of fixed assets is deducted when the depreciation is provided.

At the end of each year, the Company reviews the useful life, estimated net salvage value and depreciation method of fixed assets. When the estimated useful life differs from the original estimates, the useful life of such fixed assets should be adjusted.

(3) Recognition, measurement and depreciation of fixed assets held under finance lease

The Company recognizes the lease of a fixed asset as a financial lease when all the risks and rewards related to the leased fixed asset have been transferred substantially. The cost of fixed assets acquired by finance lease shall be

determined by the lower of the fair value of the leased asset and the present value of the minimum lease payment on the commencement date of lease. The fixed assets leased through financing adopt the depreciation policy consistent with the self-owned fixed assets to calculate the depreciation of the leased assets. Where it can reasonably be determined that ownership of the leased asset will be acquired at the end of the lease term, depreciation of the leased asset shall be calculated during the useful life of the leased asset; Where it can not reasonably be determined that ownership of the leased asset will be acquired at the end of the lease term, depreciation shall be accrued during the shorter of the lease term and the useful life of the leased asset.

17. Construction in progress

- (1) Business accounting of the construction work in process in based on project classification.
- (2) Standard and time point for carrying forward the construction work in process into fixed assets

For the construction work in process project, the book value of the fixed asset is all the expenses incurred before the construction of the asset reaches the predetermined serviceable state. Including construction costs, the original price of machinery and equipment, other necessary expenses incurred to make the construction work in process reach the predetermined serviceable state, as well as the borrowing costs incurred for the special borrowing of the project before the assets reach the predetermined serviceable state and the borrowing costs incurred for the occupied general borrowing. The Company transfers the construction work in process into fixed assets when the project installation or construction is completed and reaches the predetermined serviceable state. The constructed fixed assets which have reached the predetermined serviceable state but have not yet completed the final account shall be transferred to the fixed assets based on the estimated value according to the construction budget, cost or actual cost of work performed from the date of reaching the predetermined serviceable state, and calculates the depreciation of fixed assets in accordance with the Company's policy for depreciation of fixed assets, and the original provisional estimated value shall be adjusted according to the actual cost after the completion of the final account, but the previously accrued amount of depreciation shall not be adjusted.

18. Borrowing expenses

(1) The recognition principle of capitalization of borrowing costs and capitalization period

The borrowing expenses incurred by the Company which can be directly attributed to the acquisition and construction or production of assets that meet the capitalization conditions shall be capitalized and included into the related asset costs when the following conditions are met simultaneously:

- ① Asset expenditure has incurred;
- ② Borrowing costs have incurred;
- ③The necessary acquisition and construction or production activities have begun to make the assets reach the predetermined serviceable state.

Other interest on borrowings, discounts or premiums and exchange gains or losses shall be included in the profits or losses of the current period.

If abnormal interruption occurs in the process of acquisition, construction or production of the assets eligible for capitalization, and the interruption period exceeds 3 consecutive months, the capitalization of borrowing costs shall be suspended.

The capitalization of the borrowing costs shall be stopped when the assets that meet the capitalization conditions of the acquisition, construction or production reach the predetermined serviceable or marketable status; Borrowing costs incurred later are recognized as expenses in the current period of occurrence.

(2) The capitalization rate of borrowing costs and the calculation method of capitalization amount

Where specific borrowings are borrowed for the acquisition and construction or production of assets eligible for capitalization, the amount after deducting the interest income obtained by depositing the unused loan funds in the bank or the investment income obtained through temporary investment from the interest expenses actually incurred in the current period of the specific borrowings is determined as the amount of the capitalization of the interest charges for specific borrowings.

Where general borrowings are occupied for the acquisition and construction or production of assets eligible for capitalization, the amount of interest that should be capitalized on the general borrowings shall be calculated and determined by multiplying the asset expenditure weighted average of the accumulated asset expenditure exceeding the specific borrowings and the capitalization rate of the general borrowings. The capitalization rate is calculated and determined based on the weighted average interest rate of general borrowings.

19. Intangible assets

(1) Valuation of intangible assets

Recorded at the actual cost at the time of acquisition.

(2) Useful life and amortization of intangible assets

①Estimated useful life of the intangible assets with finite useful life:

Item	Estimated useful life	Basis
Land use right	50 years	Legal right of use
Computer	5years	Useful life is determined by the reference to the period that can bring economic benefit to the
software		Company

Item	Estimated useful life	Basis
Trademark	10years	Useful life is determined by the reference to the period that can bring economic benefit to the Company

At the end of each year, the company shall review the service life and amortization method of intangible assets with limited service life. Upon review, the service life and amortization method of intangible assets at the end of this period are not different from previous estimates.

② Intangible assets that cannot be foreseen to bring economic benefits to the enterprise shall be regarded as intangible assets with uncertain service life. For intangible assets with uncertain service life, the company shall review the service life of the intangible assets with uncertain service life at the end of each year. If the service life of the intangible assets is still uncertain after the review, an impairment test shall be conducted on the balance sheet date.

3 Amortization of intangible assets

For intangible assets with limited service life, the Company shall determine their service life at the time of acquisition, and make reasonable amortization within the service life by using the straight line method system, and the amortization amount shall be recorded into the current profits and losses according to the benefit items. The specific amount to be amortized is the amount after deducting the estimated residual value from the cost. For intangible assets for which impairment reserves have been set aside, the accumulated amount of impairment reserves for intangible assets which have been set aside shall also be deducted. For intangible assets with limited service life, its residual value shall be regarded as zero, except in the following cases: a third party promises to purchase the intangible asset at the end of its service life, or the estimated residual value information can be obtained based on the active market, and such market is likely to exist at the end of the service life of the intangible asset.

Intangible assets with uncertain service life shall not be amortized. At the end of each year, the service life of intangible assets with uncertain service life shall be reviewed. If there is evidence that the service life of intangible assets is limited, the service life of intangible assets shall be estimated and reasonably amortized in a system within the expected service life.

20. Long-term assets impairment

The asset impairment of the long-term equity investment of subsidiary companies, associated enterprises and joint ventures, the investment real estate using cost model for subsequent measurement, the fixed assets, the construction work in process, the intangible assets, the goodwill, etc. (except for inventory, investment real estate measured by fair value model, deferred income tax assets, financial assets) is determined according to the following methods:

On the balance sheet date, the Company judges whether there are any signs of possible impairment of the assets.

If there are any signs of impairment, the Company will estimate the recoverable amount and conduct an impairment test. For goodwill formed by business combination, intangible assets with uncertain service life and intangible assets that have not reached the usable state, impairment test is carried out every year, regardless of whether there is any indication of impairment.

The recoverable amount is determined according to the higher between the net amount of the fair value of the asset minus the disposal expense and the present value of the expected future cash flow of the asset. The Company estimates the recoverable amount on the basis of individual assets; If it is difficult to estimate the recoverable amount of a single asset, the recoverable amount of an asset group shall be determined on the basis of the asset group to which the asset belongs. The identification of an asset group shall be based on whether the main cash inflow generated by the asset group is independent of the cash inflow of other assets or asset group.

When the recoverable amount of an asset or an asset group is lower than its carrying amount, the Company will write down the carrying amount to the recoverable amount, record the write-down amount into the current profits and losses, and at the same time make a provision for the corresponding asset impairment.

For the impairment test of goodwill, the book value of the goodwill formed by the business combination shall be apportioned to the relevant asset group in a reasonable manner from the purchase date; If it is difficult to be apportioned to the relevant asset group, it shall be apportioned to the relevant asset group portfolio. The related asset group or asset group portfolio is the asset group or asset group portfolio that can benefit from the synergies of business combination and is not greater than the reporting segment identified by the Company.

During the impairment test, if the asset group or asset group portfolio related to goodwill shows signs of impairment, the impairment test shall be carried out on the asset group or asset group portfolio which does not contain goodwill, the recoverable amount shall be calculated and the corresponding impairment loss shall be confirmed. Then the impairment test is carried out on the asset group or the asset group portfolio containing goodwill, comparing its book value with the recoverable amount, if the recoverable amount is lower than the book value, the impairment loss of goodwill is confirmed.

Once an asset impairment loss is recognized, it shall not be reversed in the subsequent accounting period.

21.Long-term prepaid expenses

To account for the expenses that have been incurred but which shall be borne by the current and future periods and which are apportioned over a period of more than one year.

The long-term prepaid expenses will amortized equally over the period of benefit.

22. Employee remuneration

Employee remuneration refers to various forms of remuneration or compensation given by the Company to the employee for obtaining the service provided by the employee or the termination of labor relationship. Employee

remuneration includes short-term remuneration, after-service benefits, dismissal benefits and other long-term employee benefits. The benefits provided by the Company to spouses, children, dependants, deceased employees' survivors and other beneficiaries shall also be considered as employee remuneration.

According to the liquidity, employee remuneration is listed separately under the "employee remuneration payable" and "long-term employee remuneration payable" items in the balance sheet.

(1) Accounting treatment of short-term remuneration

① Basic remuneration (salary, bonus, allowance, subsidy)

During the accounting period when the employees provide services to the Company, the Company recognizes the short-term remuneration actually incurred as a liability and records it into the current profits and losses, except for those required or allowed to be included in the cost of assets under other accounting standards.

2 Employee welfare expenses

The employee welfare expenses incurred by the Company shall be included in the current profits and losses or related asset costs according to the actual amount incurred when they actually occur. If employee welfare expenses are non-monetary welfare, they shall be measured at fair value.

③Medical insurance, industrial injury insurance, maternity insurance and other social insurance premiums and housing provident funds, as well as labor union funds and staff education funds

The medical insurance, industrial injury insurance, maternity insurance and other social insurance premiums and housing provident funds the Company paid for its employees, as well as the labor union funds and staff education funds set aside by rule calculate and determine the corresponding employee remuneration amount according to the stipulated provisions basic and provision ratio during the accounting period for the employee to provide services, and confirm the corresponding liabilities and record them into the current profits and losses or related asset cost.

4 Short-term paid absence

The Company recognizes the employee's compensation related to the accumulated paid absence when the service provided by the employee increases his or her right to enjoy future paid absence, and measures it with the increase in expected payment due to the accumulated unexercised right. The Company recognizes employee compensation related to non-cumulative paid absence during the accounting period when the absence actually occurs.

(5) Short-term profit sharing plan

If the profit sharing plan satisfies the following conditions at the same time, the Company recognizes the relevant

employee compensation payable:

- A. The enterprise has a statutory or constructive obligation to pay its employees due to past events;
- B. The amount of payroll obligations arising from profit sharing plans can be reliably estimated.

(2) Accounting treatment of post-employment benefits

① Defined contribution plans

The Company recognizes the amount payable calculated according to the defined contribution plans as a liability during the accounting period when the employee provides services to it, and records it into the current profits and losses or the related asset cost.

According to the defined contribution plans, where it is not expected to pay the full amount payable within 12 months after the end of the annual reporting period for the relevant services provided by the employee, the Company measures the payroll payable by the amount after discounting the full amount payable with reference to the corresponding discount rate (determined by the treasury bonds matching with the obligatory term of defined contribution plans or the market yield of the high quality corporate bonds in the active market at the balance sheet date).

2 Defined benefit plans

A. Determine the present value and current service cost of the obligations under the defined benefit plans

According to the expected accumulative welfare unit method, the relevant demographic variables and financial variables are estimated by using unbiased and consistent actuarial assumptions, the obligations arising from the defined benefit plans are measured, and the period of attribution of the relevant obligations is determined. The Company discounts the obligations arising from the defined benefit plans according to the corresponding discount rate (determined by the treasury bonds matching with the obligatory term of defined benefit plans or the market yield of the high quality corporate bonds in the active market at the balance sheet date) to determine the present value of the obligations of the defined benefit plans and the current service cost.

B. Recognize the net liabilities or net assets of the defined benefit plans

Where there are assets in the defined benefit plans, the Company shall recognize the deficit or surplus formed by the present value of the obligations of the defined benefit plans minus the fair value of the assets of the defined benefit plans as the net liabilities or net assets of a defined benefit plan.

If there is surplus in the defined benefit plans, the Company shall measure the net assets of the defined benefit plans by the lower of the defined benefit plans' surplus or the upper limit of assets.

C. Determine the amount to be included in the asset cost or the current profit and loss

Service cost includes current service cost, past service cost and settlement gains or losses. Among them, except for the current service costs required or allowed to be included in the cost of assets under other accounting standards, other service costs are included in the current profits and losses.

Net interest on net liabilities or net assets of defined benefit plans, including interest income on plan assets, interest expense on defined benefit plan obligations, and interest on the impact of asset caps, are recorded in the current profits and losses.

D. Determine the amount to be included in other comprehensive income

Remeasurement of changes in net liabilities or net assets of a defined benefit plan, including:

- (a) Actuarial gain or loss is an increase or decrease in the present value of the previously measured defined benefit plan obligations as a result of actuarial assumptions and empirical adjustments;
- (b) Return on plan assets, deduct the amount included in the net interest on the net liabilities or net assets of the defined benefit plan;
- (c) Changes in the impact of the asset cap, deduct the amount included in the net interest on the net liabilities or net assets of the defined benefit plan.

Changes in net liabilities or net assets of the above-mentioned remeasured benefit plan are directly included in other comprehensive income and are not allowed to be transferred back to profit or loss in subsequent accounting periods, but the Company may transfer these amounts recognized in other comprehensive income within the range of equity.

(3) Accounting treatment of dismiss benefits

Where the Company provides dismiss benefits to its employees, the Company shall recognize the employees' compensation liabilities arising from dismiss benefits at the earlier day of the following two, and record them into the current profits and losses:

- ①The enterprise cannot unilaterally withdraw the dismiss benefits provided by the plan for the termination of labor relations or the downsizing proposal;
- ② When the enterprise recognizes the costs or expenses related to the restructuring involving the payment of dismiss benefits.

If the dismiss benefits are not expected to be fully paid within 12 months after the end of the annual report period,

the amount of dismiss benefits shall be discounted according to the corresponding discount rate (determined by the treasury bonds matching with the obligatory term of defined benefit plans or the market yield of the high quality corporate bonds in the active market at the balance sheet date), and the discounted amount shall be used to measure the payroll payable.

(4) Other accounting treatment methods for long-term employee benefits

① Meeting the conditions of the defined benefit plan

If other long-term employee benefits provided by the Company meet the conditions of the defined benefit plan, the payroll payable shall be measured at the discounted amount of the total amount payable.

2 Meeting the conditions of the defined benefit plan

At the end of the reporting period, the Company recognizes the employee compensation costs generated by other long-term employee benefits as the following components:

- A. Service cost;
- B. Net interest on net liabilities or net assets of other long-term employee benefits;
- C. Remeasurement of changes in net liabilities or net assets of other long-term employee benefits.

In order to simplify the relevant accounting treatment, the total net amount of the above items is included in the current profits and losses or the related asset cost.

23. Accrual liability

(1) Recognition standards

The Company recognizes an accrual liability if the obligation associated with the contingency also meets the following conditions:

- 1) the obligation is a present obligation assumed by the Company;
- ②it is probable that the performance of the obligation will result in an outflow of the economic benefits to the Company;
- 3the obligation can be measured reliably for its value.

(2) Measurement

Accrual liabilities are initially measured in accordance with the best estimate of the expenses required to fulfill the

relevant current obligations, taking into account the risks, uncertainties and time value of money related to contingencies. The book value of the Accrual liabilities is reviewed on each balance sheet date. If there is conclusive evidence that the book value cannot reflect the current best estimate, the book value shall be adjusted according to the current best estimate.

24. Recognition and measurement of revenue

(1) General principles

Income is the total inflow of economic benefits generated in the daily activities of the Company that will lead to an increase in shareholders' equity and have nothing to do with the capital invested by shareholders.

The Company recognizes revenue when the performance obligation in the contract has been fulfilled, that is, when the customer obtains the control of the relevant commodity. To gain control of a relevant commodity means to be able to dominate the use of the commodity and gain almost all economic benefits from it.

If the contract contains two or more performance obligations, the Company shall, on the commencement date of the contract, apportion the transaction price to each individual performance obligation in accordance with the relative proportion of the individual selling price of the goods or services promised in each individual performance obligation, and measure its income according to the transaction price apportioned to each individual performance obligation.

The transaction price is the amount of consideration the Company expects to be entitled to receive in connection with the transfer of goods or services to the customer, excluding payments received on behalf of third parties. When determining the contract transaction price, if there is a variable consideration, the Company determines the best estimate of the variable consideration in terms of the expected or most likely amount, and includes the transaction price in an amount not exceeding the cumulatively recognized income which is highly unlikely to be materially reversed when the relevant uncertainty is removed. If there is a significant financing component in the contract, the Company will determine the transaction price on the basis of the amount payable paid in cash by the customer at the time of acquisition of control of the goods, the difference between the transaction price and the contract consideration is amortized over the period of the contract by using the effective interest method. Where the time between the transfer of control and the payment by the customer is less than one year, the Company shall not consider the financing component.

It belongs to fulfillment of performance obligations within a certain period of time if meeting one of the following conditions; otherwise, it belongs to fulfillment of performance obligations at a certain point of time:

①The customer obtains and consumes the economic benefits brought by the performance of the Company when performing the contract;

- 2 The customer can control the goods under construction in the process of the company's performance;
- ③The products produced by the Company during the performance of the contract have irreplaceable uses, and the Company has the right to collect payment for the accumulated part of the performance completed so far during the entire contract period.

For performance obligations performed within a certain period of time, the Company shall recognize revenue in accordance with the performance progress within that period, except where the performance progress cannot be reasonably determined. The Company determines the performance progress of the services provided according to the input (or output) method. When the performance progress cannot be reasonably determined, if the cost already incurred by the Company is expected to be compensated, the revenue shall be recognized according to the amount of cost already incurred until the performance progress can be reasonably determined.

For performance obligations performed at a certain point of time, the Company recognizes revenue at the time point when the customer obtains control of the relevant goods. When judging whether the customer has acquired control of the goods or services, the Company will consider the following indications:

- ①The Company is entitled to current payment rights in respect of the goods or services, that is, the customer has current payment obligations in respect of the goods;
- ② The Company has transferred the legal ownership of the goods to the customer, that is, the customer has the legal ownership of the goods;
- ③ The Company has transferred the commodity in kind to the customer, that is, the customer has physical possession of the commodity;
- The Company has transferred the main risks and rewards of the ownership of the goods to the customer, that is, the customer has acquired the main risks and rewards of the ownership of the goods;
- ⑤ The customer has accepted the goods.

Sales return clause

For sales with a sales return clause, the Company shall recognize the revenue according to the amount of consideration to which the customer is entitled as a result of the transfer of the goods to the customer when the customer acquires the control of the relevant goods, and the amount refunded as expected due to the sales return shall be recognized as an estimated liability. At the same time, the balance after deducting the cost expected to be incurred for the recovery of the goods (including impairment of the value of the returned goods) from the book value of the returned commodity at the time of transfer is recognized as an asset, i.e. the cost of returns receivable, and deducts the net amount carryover cost of the above asset cost according to the book value of the transferred

commodity at the time of transfer. On each balance sheet date, the Company re-estimates the return of future sales and remeasures the above assets and liabilities.

Warranty obligations

According to the contract and legal provisions, the Company provides quality assurance for the sale of goods, construction of the project, etc. For the warranty quality assurance designed to assure customers that the products sold meet established standards, the Company conducts accounting treatment in accordance with the Accounting Standards for Business Enterprises No. 13 - Contingencies. For service class quality assurance that provides a separate service in addition to assuring customers that the goods sold meet established standards, the Company regards it as a single performance obligation and apportions part of the transaction price to the service class quality guarantee in accordance with the relative proportion of the separate price for providing goods and service class quality guarantee, and recognizes the revenue when the customer obtains the control of the service. When assessing whether quality assurance provides a separate service in addition to assuring the customer that the goods sold meet established standards, the Company considers such factors as whether the warranty is a statutory requirement, the quality warranty period and the nature of the task to which the Company is committed.

Principal responsible persons and agents

If the Company acquires the control of the trading commodities from a third party and then transfers them to customers, the Company shall have the right to determine the price of the trading commodities independently, that is, the Company can control the trading commodities before transferring them to the customers, therefore, the Company is the principle responsible person, and the revenue is recognized according to the total consideration received or receivable. Otherwise, the Company, acting as the agent, shall recognize the revenue on the basis of the amount of commissions or service charges it is expected to be entitled to receive, this amount should be determined on the basis of the net amount after deducting the price payable to other relevant parties from the total consideration received or receivable, or on the basis of the amount or proportion of fixed commissions, etc.

Customer consideration payable

If there is a customer consideration payable in the contract, unless the consideration is to obtain other clearly distinguishable goods or services from the customer, the Company will offset the consideration payable against the transaction price, and the Company will offset the current revenue at the later time point between the time recognizing the relevant revenue or the time paying (or promising to pay) the customer consideration.

Contractual rights not exercised by the client

If the Company receives payments for sales of goods or services from customers in advance, it will first recognize such payments as liabilities and then turn them into income when the relevant performance obligations are fulfilled. Where any advance received by the Company is not refundable and the Customer may waive all or part of its contractual rights, and the Company anticipates to be entitled to an amount in connection with the contractual rights waived by the customer, such amount shall be recognized as revenue pro rata according to the mode in which the customer exercises the contractual rights. Otherwise, the Company will convert the relevant balance of the said liabilities into income only when it is highly unlikely that the customer will require the fulfillment of the remaining performance obligations.

(2) Specific methods

Specific methods for revenue recognition of the Company are as follows:

① Commodity sales contract

The sales contract between the Company and the customer contains the performance obligation of the transferred goods, which belongs to the performance obligation at a certain point in time.

The revenue recognition of auto sales and jewelry wholesale need to satisfy the following conditions: the Company has delivered goods to the customer according to the contract and customer has accepted the goods, the payment has been received or the receipt has been obtained and the associated economic benefits are likely to flow in, the major risks and rewards of ownership of the goods have been transferred, and the legal ownership of the goods has been transferred.

②Auto repair and test contract

The performance obligations contained in the auto repair and test contract between the Company and the customer belong to the performance obligations at a certain point in time.

The revenue recognition of auto repair and test contract needs to meet the following conditions: the Company has completed the service of auto repair and test as agreed in the contract, settled all materials and working hours with the customer, and allowed the customer's automobile to leave the Company's repair shop.

(3) Provision of service contract

The provision of service contract between the Company and customers includes the performance obligations for services related to the rental of real estate, as the customer obtains and consumes the economic benefits brought by the Company's performance of the contract while the Company performs the contract, the Company considers them as the performance obligations to be performed within a certain period of time, and apportions and recognizes them equally during the service provision period.

(4) Real estate lease contract

For the recognition method for the Company's real estate rental income, see "Notes V. 27".

25. Government subsidy

(1) Recognition

Government subsidies are recognized when the following conditions are met at the same time:

- ①The company can meet the conditions attached to the government subsidies;
- 2) The company can receive government subsidies.

(2) Measurement

If the government subsidy is a monetary asset, it shall be measured according to the amount received or receivable. If the government subsidy is a non-monetary asset, it shall be measured at fair value; If the fair value cannot be reliably obtained, it shall be measured according to the nominal amount of 1 yuan.

(3) Accounting treatment of government subsidies

(1) Asset-related government subsidies

The government subsidies obtained by the company for the purchase and construction or the formation of long-term assets in other ways are classified as the government subsidies related to assets. Government subsidies related to assets are recognized as deferred income, which shall be included into profits and losses in a reasonable and systematic way in the service life of the relevant assets. Government subsidies measured in nominal amounts shall be directly included in current profits and losses. If the relevant assets are sold, transferred, scrapped or destroyed before the end of their useful life, the undistributed balance of relevant deferred income shall be transferred to the current profit sand loss of the asset disposal.

(2) Government subsidies related to income

Government subsidies other than those related to assets are classified as income-related government subsidies. The government subsidies related to income shall be conducted accounting treatment according to the following regulations in different cases:

Those used to compensate the relevant costs or losses of the Company in subsequent periods shall be recognized as deferred income and shall be recorded into the current profits and losses during the period in which the relevant costs or losses are recognized;

Those used to compensate the relevant costs or losses incurred by the Company shall be directly recorded into the current profit and loss.

For the government subsidies that contain both the part related to assets and the part related to income, separate different parts for accounting treatment; for the indistinguishable part, the whole is classified as income-related government subsidies.

Government subsidies related to the daily activities of the Company shall be included in other earnings in accordance with the substance of economic business. The government subsidies unrelated to the daily activities of the Company shall be included in the non-operating income and expenditure.

3 Return of government subsidies

When the recognized government subsidies need to be returned, the book value of the assets shall be adjusted if the book value of the relevant assets is written down during the initial recognition; If there is a balance of the relevant deferred income, the book balance of the relevant deferred income shall be written down, and the excess part shall be included into the current profits and losses; Under other circumstances, they shall be directly recorded into current profits and losses.

26. Deferred income tax assets and deferred income tax liabilities

The Company usually recognizes and measures the amount of income tax impact of taxable temporary differences or deductible temporary differences as deferred income tax liabilities and deferred income tax assets by using the balance sheet liability method based on the temporary differences between the book value of assets and liabilities on the balance sheet date and the tax base. The Company does not discount deferred tax assets and deferred tax liabilities.

(1) Recognition of deferred tax assets

For deductible temporary differences, deductible losses and tax credits that can be carried forward to the next year, their amount of impact on income tax is calculated at the expected income tax rate during the reversal period and is recognized as a deferred income tax asset, but is within the limit of future taxable income that the Company are likely to use to offset deductible temporary differences, deductible losses and tax credits.

The impact amount of income tax of a deductible temporary difference arising from the initial recognition of an asset or liability in a transaction or event simultaneously having both the following characteristics shall not be recognized as a deferred income tax asset:

- A. The transaction is not a business merger;
- B. The transaction occurs without affecting either accounting profit or taxable income (or deductible loss).

The impact amount of income tax of the Company's deductible temporary differences related to its investments in subsidiaries, associated companies and joint ventures shall be recognized as deferred income tax assets if both of the following conditions are met:

- A. Temporary differences are likely to be reversed in the foreseeable future;
- B. Taxable income is likely to be obtained in the future to offset the deductible temporary difference;

At the balance sheet date, if there is conclusive evidence that sufficient taxable income is likely to be obtained in the future period to offset the deductible temporary difference, the deferred income tax assets not recognized in the previous period shall be recognized.

At the balance sheet date, the Company reviews the book value of the deferred tax assets. Write down the book value of the deferred tax asset if it is likely that sufficient taxable income will not be available to offset the benefit of the deferred tax asset in future periods. When sufficient taxable income is likely to be obtained, the amount of the write-down shall be reversed.

(2) Recognition of deferred income tax liabilities

The impact of all taxable temporary differences of the Company on income tax is measured at the expected income tax rate during the reversal period and is recognized as a deferred income tax liability, except in the following cases:

- ① The effect of taxable temporary differences on income tax arising from the following transactions or events is not determined as a deferred income tax liability:
 - A. Initial recognition of goodwill;
- B. Initial recognition of assets or liabilities arising from transactions having the following characteristics: the transaction is not a business combination and affects neither accounting profit nor taxable income or deductible losses when the transaction occurs.
- ② The impact amount of income tax of the Company's taxable temporary differences related to its investments in subsidiaries, associated enterprises and joint ventures shall be recognized as deferred income tax liabilities, except where the following two conditions are met:
 - A. The Company can control the time for the temporary difference to be reversed;
 - B. The temporary difference is unlikely to reverse in the foreseeable future.

(3) Recognition of deferred income tax liabilities or assets involved in a particular transaction or event

(1) Deferred income tax liabilities or assets related to the business combination

For taxable temporary differences or deductible temporary differences arising from business combinations not under the same control, when a deferred tax liability or deferred tax asset is recognized, the associated deferred income tax expense (or income) is usually adjusted for the goodwill recognized in the business combination.

2) Items directly included in owners' equity

The current income tax and deferred income tax related to the transaction or event directly included in the owner's equity shall be included in the owner's equity. The influence of temporary differences on income taxes are included in the transactions or events of owners' equity, including other comprehensive income generated by changes in fair value of other creditor's rights investments, retained earnings at the beginning of the period adopting retroactive adjustment method for changes in accounting policies or adjusting retroactive restatement method for prior (or important) accounting errors correction difference, and hybrid financial instruments containing both liabilities ingredients and equity ingredients at the same time included in the owner's equity at the initial recognition, etc.

3 Recoverable loss and tax deduction

A. Recoverable losses and tax deductions arising from the Company's own operations

Deductible loss refers to the loss calculated and determined in accordance with the provisions of the tax law which is allowed to be made up with the taxable income of subsequent years. Uncovered losses (deductible losses) and tax deductions that can be carried forward to subsequent years in accordance with the provisions of the tax law shall be dealt with as deductible temporary differences. Where sufficient taxable income is likely to be obtained in the future periods in which losses or tax deductions are expected to be available, the corresponding deferred income tax asset shall be recognized within the limit of the taxable income likely to be obtained, and the income tax expense in the current income statement shall be reduced.

B. Recoverable uncovered losses of the combined enterprise resulting from business combination

In a business combination, the Company shall not recognize the deductible temporary differences acquired by the acquiree that do not meet the conditions for the recognition of deferred income tax assets on the purchase date. Within 12 months after the acquisition date, if new or further information indicates that relevant conditions existed on the date of purchase, and it is expected that the economic benefits of the acquiree brought by the deductible temporary differences on the purchase date can be realized, recognize the relevant deferred income tax assets, and reduce the goodwill at the same time, if the goodwill is insufficient for write-down, the difference part shall be recognized as the current profits and losses; In addition to the above conditions, the deferred income tax assets related to the business combination shall be recognized and recorded into the current profits and losses.

4)Temporary differences formed by merger offset

When preparing the consolidated financial statements, where there is a temporary difference between the book value of the assets or liabilities in the consolidated balance sheet and the tax base of the taxable entity due to the offset of unrealized internal sales gains and losses, the deferred income tax assets and deferred income tax liabilities shall be recognized in the consolidated balance sheet, and the income tax expenses in the consolidated income statement shall be adjusted at the same time, but except for the transactions or events directly included in owners' equity and the deferred income taxes related to the business combination.

(5) Equity-settled share-based payments

If the tax law allows a pre-tax deduction for expenses related to share-based payments, within the period during which costs and expenses are recognized in accordance with accounting standards, the Company shall calculate and determine its tax base and temporary differences arising therefrom according to the amount of pre-tax deductions estimated by the information obtained at the end of the accounting period, and recognize the relevant deferred income taxes in compliance with recognition conditions. Among them, the amount that can be deducted before tax in the future period is expected to exceed the cost and expense related to share-based payment recognized in accordance with the provisions of accounting standards, and the income tax impact of the excess part shall be directly recorded into the owner's equity.

27. Leasing

The leases that transfer substantially all the risks and rewards associated with the ownership of assets are regarded as financial leases, except for those that are operating leases.

(1) Accounting treatment of operating leases

①When the Company acts as the lessee of an operating lease, the rental expenses of the operating lease shall be recorded into the current profits and losses in each period of the lease term according to the straight line method or according to the usage of the leased asset. Where the lessor provides a rent-free period, the Company shall allocate the total rent by the straight line method or other reasonable methods throughout the entire lease term without deducting the rent-free period, and recognize the rent expenses and the corresponding liabilities during the rent-free period. If the lessor bears certain expenses of the lessee, the Company shall allocate the rent expense balance after deducting such expenses from the total rent expenses during the lease term.

Initial direct expenses are recorded into the profits and losses of the current period. If there is contingent rent agreed in the agreement, it will be recorded into the current profit and loss when it actually occurs.

②When the Company acts as a lessor of an operating lease, straight line method is adopted to recognize the rent

received as income during the lease term. Where the lessor provides a rent-free period, the lessor shall allocate the total rent by the straight line method or other reasonable methods throughout the lease term without deducting the rent-free period, and the lessor shall also recognize the rental income during the rent-free period. If the lessee bears certain expenses, the Company shall allocate such expenses within the lease term according to the balance of the rental income after deducting such expenses from the total rental income.

Initial direct expenses are recorded into the profits and losses of the current period. The larger amount will be capitalized and recorded into the current profits and losses on the same basis as the rental income during the entire operating lease term. If there is contingent rent agreed in the agreement, it shall be recorded into current income when it actually occurs.

(2) Accounting treatment of finance lease

① When the Company is the lessee of a finance lease, on the beginning date of the lease term, the lower of the fair value of the leased asset and the present value of the minimum lease payment on the beginning date of the lease shall be regarded as the record value of the leased asset, the minimum lease payment shall be regarded as the record value of the long-term payable, and the difference shall be regarded as unrecognized finance fees. In each period of the lease term, the effective interest rate method is adopted for apportionment, which is recognized as the current financing costs and included into the financial expenses.

The initial direct expenses incurred shall be included in the value of the leased asset.

When calculating the depreciation of finance lease assets, the Company adopts the depreciation policy consistent with its own depreciable assets, and the period of depreciation is determined by the lease contract. If it can reasonably be determined that the Company will acquire ownership of the leased asset at the expiration of the lease term, the life of the leased asset on the commencement date of the lease term will be regarded as the depreciation period. If it can not reasonably be determined whether the Company will be able to acquire ownership of the leased asset at the expiration of the lease term, the shorter of the lease term or the life of the leased asset shall be taken as the depreciation period.

② When the Company acts as the lessor of the finance lease, the sum of the minimum lease receivables on the lease commencement date and the initial direct expenses shall be recorded as the book value of the finance lease receivables on the lease commencement date and recorded into the long-term receivables in the balance sheet, and the unsecured residual value shall be recorded at the same time. The difference between the sum of the minimum lease receivables, the initial direct expenses and the unsecured residual value and its present value is regarded as unrealized financing income, which is recognized as lease income by using the effective interest rate method in each period of the lease term.

28. Important accounting judgement and estimates

The Company continuously evaluates the used significant accounting estimates and key assumptions based on historical experience and other factors, including reasonable expectations of future events. Significant accounting estimates and key assumptions that are likely to lead to a significant adjustment risk in the carrying value of assets and liabilities in the next fiscal year are listed as below:

Classification of financial assets

The Company's major judgments involved in determining the classification of financial assets include the analysis of business model and contract cash flow characteristics.

The Company determines the business model for the management of financial assets at the level of financial asset portfolio, factors taken into account include the way in which the performance of financial assets is evaluated and reported to key management personnel, the risks affecting the performance of financial assets and the way in which the performance of financial assets is managed, and the way in which the management personnel of related businesses are compensated, etc.

When evaluating whether the contractual cash flow of financial assets is consistent with the basic lending arrangement, the Company has the following major judgments: whether the principal may change in the time distribution or amount within the duration due to repayment in advance or other reasons; whether the interest includes only the time value of money, credit risk, other fundamental borrowing risks, and consideration for costs and profits. For example, whether the amount repaid in advance only reflects the outstanding principal and interest based on the outstanding principal, as well as reasonable compensation paid for early termination of the contract.

Measurement of expected credit loss of accounts receivable

The Company calculates the expected credit loss of accounts receivable through the exposure at default of accounts receivable and the expected credit loss rate, and determines the expected credit loss rate based on the probability of default and the loss given default. When determining the expected credit loss rate, the Company uses data such as its internal historical credit loss experience, and adjusts historical data in the light of current conditions and forward-looking information. When considering forward-looking information, the Company uses indicators such as the risk of economic downturns, external market conditions, technological environment and changes in customer conditions. The Company regularly monitors and reviews assumptions related to the calculation of expected credit losses.

Deferred tax assets

Deferred tax assets should be recognized for all unutilized tax losses to the extent that there is a high likelihood of sufficient taxable profit to offset the loss. This requires management to use a great deal of judgment to estimate the timing and amount of future taxable profits, and combine with tax planning strategies to determine the amount

of deferred tax assets to be recognized.

Determination of fair value of unlisted equity investments

The fair value of an unlisted equity investment is the projected future cash flow discounted by the current discount rate of the project with similar terms and risk characteristics. Such valuation requires the Company to estimate expected future cash flows and discount rates and is therefore subject to uncertainty. In limited cases, where the information used to determine the fair value is insufficient, or where the possible estimated amounts of the fair value are distributed over a wide range and the cost represents the best estimate of the fair value within that range, the cost may represent the appropriate estimate of the fair value within that range.

29. Changes of important accounting policies and accounting estimate

- (1)Changes of important accounting policies
- \Box Applicable $\sqrt{\text{Not applicable}}$
- (2) Changes of important accounting estimate
- □Applicable √ Not applicable
- (3)Adjustment on the relevant items of financial statement at beginning of the year when implemented the new leasing standards since 2021

Applicable

Whether need to adjust the balance sheet items at the beginning of the year

□Yes √No

Explain the reasons of no need to adjust the balance sheet items at the beginning of the year

On 7 December 2018, the Ministry of Finance revised and issued the "Accounting Standards for Business Enterprises No.21- Leasing" (Cai Kuai [2018] No.35) (hereinafter referred to as New Leasing Standards), and requires the enterprises listed both domestically and internationally, as well as enterprises listed aboard with adoption of the IFRS or ASBEs for the preparation of financial statement, should implemented the new leasing standards since 1 Jan. 2019; other enterprise implementing ASBEs will be effective from 1 Jan. 2021. The Company disclose the accounting statements in accordance with the requirements of the new leasing standards from 1 Jan. 2021, without adjusting the comparable figures for year of 2020, and the accounting policy change will not affect relevant financial index of the Company for year of 2020.

(4) Retrospective adjustment of early comparison data description when implemented the new leasing standards since 2021

X. Risk related with financial instrument

The Company's risks related to financial instruments originate from various financial assets and financial liabilities recognized by the Company in the course of operation, including credit risk, liquidity risk and market risk.

The management of the Company is responsible for the management objectives and policies of various risks related to financial instruments of the Company. Operating management is responsible for daily risk management through functional departments (e.g., the credit management department of the Company checks the credit sales of the company on a case-by-case basis). The internal audit department of the Company conducts daily supervision over the implementation of the company's risk management policies and procedures and reports relevant findings to the audit committee of the Company in a timely manner.

The overall goal of the Company's risk management is to formulate risk management policies that may minimize the risks associated with various financial instruments without unduly affecting the company's competitiveness and resilience.

1. Credit risk

Credit risk is the risk that one party of a financial instrument fails to fulfill its obligations, resulting in a financial loss to the other party. The credit risk of the Company is mainly generated from monetary funds, accounts receivable, other receivables and long-term receivables, etc. The credit risk of these financial assets is derived from the default of the counterparty, and the maximum risk exposure is equal to the book amount of these instruments.

The Company's monetary funds are mainly deposited in commercial banks and other financial institutions. The Company believes that these commercial banks have high credit and asset status and low credit risk.

For receivables, other receivables and long-term receivables, the Company establishes relevant policies to control credit risk exposure. The Company evaluates customers' credit qualifications and sets up corresponding credit periods based on their financial status, the possibility of obtaining guarantees from third parties, credit history and other factors such as current market conditions. The Company regularly monitors the credit records of customers. For customers with poor credit records, the Company will adopt written payment reminders, shortening or cancellations of credit periods, etc., to ensure that the Company's overall credit risk is within a controllable range.

(1) Judgment criteria for a significant increase in credit risk

On each balance sheet date, the Company evaluates whether the credit risk of the relevant financial instrument has increased significantly since the initial recognition. In determining whether the credit risk has increased significantly since the initial recognition, the Company considers the reasonable and evidence-based information that can be obtained without unnecessary additional cost or effort, including qualitative and quantitative analysis based on the Company's historical data, external credit risk ratings and forward-looking information. On the basis of a single financial instrument or a portfolio of financial instruments with similar credit risk characteristics, the Company determines the change of the default risk during the expected duration of the financial instrument by comparing the risk of default of the financial instrument on the balance sheet date with the risk of default on the initial recognition date.

When one or more of the following quantitative or qualitative criteria are triggered, the Company considers that

the credit risk of the financial instrument has significantly increased. The quantitative criteria mainly mean that the probability of default of the remaining duration on the reporting date increases over a certain percentage compared with the initial recognition. The qualitative criteria are the significant adverse changes in major debtor's business or financial situation, the list of early warning customers, etc.

(2) Definition of assets with credit impairment

In order to determine whether credit impairment has occurred, the Company adopts the definition criteria consistent with the internal credit risk management objectives for relevant financial instruments, and considers both quantitative and qualitative indicators.

When assessing whether the debtor has suffered credit impairment, the Company mainly considers the following factors: major financial difficulties of the issuer or the debtor; the debtor breaches the contract, such as the default or overdue payment of interest or principal; the creditor, for economic or contractual reasons relating to the debtor's financial difficulties, gives the debtor concessions that it would not have given in any other circumstances; the debtor is likely to go bankrupt or undergo other financial restructuring; the financial difficulties of the issuer or debtor lead to the disappearance of the active market for the financial asset; purchase or origination of a financial asset at a substantial discount reflects the fact that a credit loss has occurred.

The credit impairment of financial assets may be caused by the joint action of several events, but is not necessarily by separately identifiable events.

(3) Parameters of expected credit loss measurement

Depending on whether the credit risk has significantly increased and whether the credit impairment has occurred, the Company measures the impairment reserve for different assets at the expected credit loss of 12 months or the entire duration respectively. The key parameters of expected credit loss measurement include probability of default, loss given default and exposure at default. The Company establishes the probability of default, loss given default and exposure at default model by taking into account the quantitative analysis and forward-looking information of historical statistical data (such as counterparty rating, guarantee method and collateral type, repayment mode, etc.).

The probability of default is the probability that the debtor will not be able to meet its reimbursement obligations in the next 12 months or in the entire duration.

Loss given default refers to the Company's expectation to the extent of loss caused by exposure at default. The loss given default also varies depending on the type of the counterparty, the type and priority of the claim, and the collateral. The loss given default is the percentage of the risk exposure loss when the default occurs, which is calculated on the basis of the next 12 months or the entire duration;

Exposure at default is the amount payable by the Company at the time of the occurrence of default over the next 12 months or over the entire remaining duration. Both the assessment of a significant increase in credit risk and the calculation of expected credit losses involve the forward-looking information. Through historical data analysis, the Company identifies the key economic indicators that affect the credit risk and expected credit loss of each business type.

The maximum credit risk exposure of the Company is the carrying amount of each financial asset on the balance sheet. The Company does not provide any other guarantee which may expose the Company to credit risk.

2. Liquidity risk

Liquidity risk refers to the risk of capital shortage when an enterprise performs its obligations of settlement in the form of cash payment or other financial assets. The Company is responsible for the overall cash management of the company's subsidiaries, including short-term investment of surplus cash and financing of loans to meet projected cash needs. It is the Company's policy to regularly monitor short - and long-term working capital requirements and compliance with borrowing agreements to ensure adequate cash reserves and marketable securities readily available for cash for cash at any time.

As of June 30, 2021, the maturity periods of the company's financial liabilities are as follows:

	June 30, 2021			
Item	Within 1 year	1-2 years	2-3 years	Over 3 years
Accounts payable	78,222,681.88			
Other payable	171,168,970.30			
Long term loan	40,886,819.43			
Long-term payable				3,920,160.36
Total	290,278,471.61	-	-	3,920,160.36

3. Market risk

(1) Foreign exchange risk

The exchange rate risk of the Company mainly derives from the foreign currency assets and liabilities held by the Company and its subsidiaries that are not denominated in their standard currency for accounting. The Company operates in mainland China and its main activities are denominated in RMB. Therefore, the Company's exposure to the foreign exchange market is not material.

On the balance sheet date, the Company's foreign currency monetary assets and liabilities are described in Note V 52 to the financial statements.

(2) Interest rate risk

The Company's interest rate risk is mainly generated from long-term bank borrowing. Financial liabilities with floating rate expose the Company to cash flow interest rate risk, while financial liabilities with fixed rate expose the Company to fair value interest rate risk. The Company determines the relative ratio of fixed and floating rate contracts based on prevailing market conditions.

The finance department of the Company headquarters continuously monitors the interest rate of the Group. An increase in interest rates will increase the cost of additional interest-bearing debt and the interest expense of the Company's outstanding interest-bearing debt with floating interest rate and will have a material adverse impact on the Company's financial results, the management will make timely adjustments based on the latest market conditions.

Large contract	192,579,624.03	220,523,772.58

2. Contingency

(1) Contingency on balance sheet date

In March 1998, Tellus Group provides guarantee for the loan of 3 million yuan to China Citic Bank for Jintian Industrial (Group) Co., Ltd. (hereinafter referred to as Jintian Company). Subsequently, as Jintian Company failed to repay the loan, China Citic Bank filed a lawsuit, requiring Jintian Company to fulfill the repayment responsibility and Tellus Group to assume the guarantee responsibility. As a result, Tellus Group was forced to deduct 4,081,830 yuan (including 3 million yuan of principal, 1,051,380 yuan of interest, 25,160 yuan of legal fees, and execution fee of 5,290 yuan). In October 2005, Tellus Group filed a lawsuit with the People's Court of Luohu District, Shenzhen City, requesting that Jintian Company should be ordered to pay the deducted money to Tellus Group. The court ruled in favour of Tellus Group, and Tellus Group applied for compulsory execution, but the execution was suspended as Jintian Company had no property for execution.

In August 1997, Tellus Group provided guarantee for Jintian Company's loan of US \$2 million to Shenzhen Development Bank Renminqiao Branch. Subsequently, due to Jintian Company's failure to repay the loan, Shenzhen Development Bank filed a lawsuit, requiring Jintian Company to fulfill the repayment responsibility and Tellus Group to assume the guarantee responsibility. Tellus Group repaid US \$2,960,490 plus interest to Shenzhen Development Bank. In 2008, Tellus Group filed a lawsuit with the People's Court of Luohu District, Shenzhen City, requesting that Jintian Company should be ordered to pay the said amount and interest repaid by Tellus Group on its behalf. Through the mediation of the People's Court of Luohu District, Shenzhen, they reached the agreement that Jintian Company should pay the amount of US \$2,960,490 to Tellus Group by October 31, 2008, and Tellus Group should exempt Jintian Company from interest payment. If Jintian Company failed to pay on time, it should pay a penalty for overdue payment according to the RMB benchmark lending rate for the same period published by the People's Bank of China. The People's Court of Luohu District made the paper of civil mediation (2008) SLFMYCZ No.937. Jintian Company did not fulfill its repayment obligation, Tellus Group applied for compulsory enforcement, but the execution was ruled to terminate as Jintian Company had no property for execution.

In 2014, Jintian Company filed for bankruptcy due to its insolvency and later entered the bankruptcy reorganization process. On January 29, 2016, Shenzhen Intermediate People's Court ruled that the execution of the reorganization plan of Jintian Company was completed and the bankruptcy proceedings were terminated. Jintian Company should make additional distributions to creditors including Tellus Group according to the reorganization plan, and Tellus Group should be distributed cash of 325,000 yuan and 427,604 A shares and 163,886 B shares of Jintian Company. On August 15, 2018, after failing to communicate with Jintian for many times about the cash and shares to be distributed after the bankruptcy and reorganization of Jintian Company, Tellus Group filed a lawsuit with the People's Court of Qianhai Cooperation Zone, and the Qianhai Court issued a civil judgment (2018) Yue 0391 Min Chu No. 3104, Jintian Company was ordered to pay Tellus Group 325,000 yuan in cash and 427,604 A shares and 163,886 B shares of Jintian Company within five days of the legal effect of this judgment (if the shares cannot be delivered, they may be paid in cash at the market price of the shares on the last day of the deadline for performance). On January 7, 2021, Tellus Group applied to the People's Court of Qianhai Cooperation Zone for compulsory execution, but the execution was terminated as no available property of Jintian Company was found. Tellus Group filed for the execution of the bankruptcy application to Qianhai Court to apply for the bankruptcy of Jintian Company again, Qianhai Court has transferred our company's application to Shenzhen Intermediate People's Court for bankruptcy examination. As of the approval date of this financial report, Shenzhen Intermediate People's Court has not yet issued the examination result, and Tellus Group has not received the execution payment.

Tellus Group has dealt with the above claims as non-operating expenses in the early years, included them in the profits of the year, which no longer have an impact on future operations.

8. Other

On July 17, 2020, the 17th interim meeting of the 9th Board of Directors of the Company deliberated and approved the Proposal on the Signing of Intention Agreement Between the Subsidiary and Hubei Hans' Industry Investment Co., Ltd. According to the agreement signed on the same day between the company's subsidiary Auto Industry and Trade Company (Party A) and Hubei Hans' Industry Investment Co., Ltd. (Party B), Party B undertakes to participate in Party A's plan to sell 25% of its equity in Shenzhen Dongfeng Motor Co., Ltd through the Shanghai United Asserts and Equity Exchange in accordance with laws and regulations. The target equity shall be transferred at a price not less than 1/2 of the transaction price of 50% of the equity held by Party B in Shenzhen Dongfeng Motor Co., Ltd., which is transferred to Party B by Dongfeng Special Commercial Vehicle Co., Ltd., and at a price not less than the appraisal price of the third-party intermediary selected or approved by Party A. Party B shall pay Party A a performance bond of 50,000,000.00 yuan, and the interest on the bond shall be calculated according to the agreement. Auto Industry and Trade Company has received a performance bond of 50,000,000.00 yuan from Hubei Hans' Industry Investment Co., Ltd. in July 2020, and accrued interest was 2,200,000.00 yuan as of June 30, 2021. As of now, Auto Industry and Trade Company has not publicly listed the said stock equity for sale.
